Key Risks

The Fund may have exposure to a small number of investments or have exposure to a few countries, industries, sectors of the economy or issuers. This can make the share price of the Fund fluctuate significantly.

The following is applicable if you subscribe for or settle shares in a different currency than the fund or share-class currency: Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies.

The Fund is exposed to market movements in a single country or region which may be adversely affected by political or economic developments, government action or natural events that do not affect a fund investing in broader markets. The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss. Bonds are exposed to credit risk and interest rate risk. There is a risk that the bond issuer may be unable to pay interest or repay the bond principal, resulting in your investment suffering a loss. If interest rates rise, typically the value of the bond will fall, which could also affect the value of your investment.
