Objective and strategy

Xtrackers Cybersecurity Select Equity ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive Cyber Security ESG Screened Index (the “Underlying Index”). The index is a representation of securities that have business operations in the field of cyber security and that fulfill certain sustainability criteria . Companies in the cybersecurity field face intense competition which may have an adverse effect on profit margins. These companies also face heightened risk caused by obsolescence due to rapid technological developments, potential loss or impairment of patent and intellectual property rights and the risk of cyber-attacks. The MSCI All Country World Index (ACWI) is a global equity index that measures the equity performance in both the developed and emerging markets by tracking the performance of 47 countries comprising 23 developed and 24 emerging markets.

ETF performance (12/31/25)

MSCI All Country World Index	3.29%	22.34%	—	—	—	18.71%

Performance quoted represents past performance and does not guarantee future results. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Shares are bought and sold at market price (closing price) not net asset value (NAV) and are not individually redeemed from the Fund. Market price returns are based on the midpoint of the bid/ask spread at 4:00 pm Eastern Time (when NAV is normally determined) and do not represent the return you would receive if you traded at other times. To obtain the most recent month-end performance data visit www.Xtrackers.com or call 1-844-851-4255.

Indexes are unmanaged; you cannot invest in an index. Index performance is gross of fees and assumes dividend reinvestment. Inclusion of fees would have reduced returns.

Read the prospectus carefully before investing.

ESG investment strategy risk:

The Underlying Indices' ESG methodology, and thus the Funds' investment strategy, limits the types and number of investment opportunities available to the Funds and, as a result, the Fund may underperform other funds that do not have an ESG focus. The Underlying Index's ESG methodology may result in the Fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the index provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

War, terrorism, sanctions, economic uncertainty, trade disputes, public health crises and related geopolitical events have led and, in the future, may lead to significant disruptions in U.S. and world economies and markets, which may lead to increased market volatility and may have significant adverse effects on the fund and its investments.

Risk: Companies in the cybersecurity field face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Companies in the cybersecurity field also face heightened risk caused by obsolescence due to rapid technological developments, by potential loss or impairment of patent and intellectual property rights and by the risk of cyber-attacks. Incorporation of ESG criteria in the fund's investment strategy does not guarantee a return or protect against a loss, limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have an ESG focus. Regulatory changes or interpretations regarding the definitions and/or use of ESG criteria could have a material adverse effect on the fund's ability to invest in accordance with its investment policies and/or achieve its investment objective, as well as the ability of certain classes of investors to invest in funds following an ESG strategy such as the fund. Foreign investing involves greater and different risks than investing in U.S. companies, including currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political instability and differing auditing and legal standards. Any fund that focuses in a particular segment of the market or region of the world will generally be more volatile than a fund that invests more broadly. This fund is non-diversified and can take larger positions in fewer issues, increasing its potential risk. An investment in the fund should be considered only as a supplement to a complete investment program for those investors willing to accept the risks associated with the fund. Please read the prospectus for more information.
