Key Risks

The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss. The Fund will use financial contracts (known as derivatives) to try to reduce the effect of currency fluctuations between the currency of its assets and the currency of the shares. This may not be effective and may prevent the Fund from benefitting from an increase in value of (or expose a Fund to the decrease in value of) a particular currency.

The following is applicable if you subscribe for or settle shares in a different currency than the fund or share-class currency: Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. Bonds are exposed to credit risk and interest rate risk. There is a risk that the bond issuer may be unable to pay interest or repay the bond principal, resulting in your investment suffering a loss. If interest rates rise, typically the value of the bond will fall, which could also affect the value of your investment.

Reference Index key features

The FTSE ESG Select World Government Bond Index – DM aims to reflect the performance of the following market:

- Fixed-rate, local currency, investment-grade sovereign bonds only.
- Exposure across the whole yield curve (minimum time to maturity of 1 year).
- Universe of eligible bonds must meet certain ESG criteria.
- Only countries classified as 'Free' by Freedom House are eligible for inclusion.
- Weights are tilted so the index provides higher exposures to countries that have a higher ESG score, and lower exposures to countries that have a lower ESG score.

Additional information on the Index and the general methodology behind the indices can be found on the FTSE Russell Index website (<https://www.yieldbook.com/>).
