Summary Prospectus | January 27, 2026

Xtrackers Europe Defense Technologies ETF

Ticker: XDEF

Stock Exchange: NASDAQ

Before you invest, you may want to review the fund’s prospectus, which contains more information about the fund and its risks. You can find the fund’s prospectus, reports to shareholders, Statement of Additional Information (SAI) and other information about the fund online at go.dws.com/ETFpros. You can also get this information at no cost by e-mailing a request to dbxquestions@list.db.com, calling 1-844-851-4255 or asking your financial representative. The Prospectus and SAI, both dated January 27, 2026, as may be revised or supplemented from time to time, are incorporated by reference into this Summary Prospectus.

INVESTMENT OBJECTIVE

The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the STOXX Europe Total Market Defence, Space and Cybersecurity Innovation 50-25 Index.

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy, hold and sell shares. **You may also pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of shares of the fund, which are not reflected in the table and example below.**

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.35
Other Expenses ¹	None
Total annual fund operating expenses	0.35

¹ Because the fund is new, “Other Expenses” are based on estimated amounts for the current fiscal year.

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 Year	3 Years
	\$36	\$113

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance.

Since the fund is newly offered, portfolio turnover information is not available.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the STOXX Europe Total Market Defence, Space and Cybersecurity Innovation 50-25 Index (“Underlying Index”). The Underlying Index seeks to capture the performance of European listed equity securities with established revenue and/or patent exposures to the defense, space and cybersecurity sectors (the “Themes”). The Underlying Index is based on the STOXX Europe Total Market Index (the “Parent Index”), which includes large, medium and small-capitalization companies from 17 Western European countries. The Underlying Index is a free float-adjusted market capitalization weighted index and constituent weights are capped such that the sum of all constituent weights above 4.5% does not exceed 45% of the Underlying Index, and no single constituent weight exceeds 8% of the Underlying Index. The Underlying Index and the Parent Index are calculated and maintained by STOXX Ltd. (“Index Provider” or “STOXX”).

Underlying Index – Eligible Universe and Constituent Selection

The Underlying Index's eligible universe consists of all of the companies in the Parent Index, which represents the Western Europe region as a whole and covers approximately 95% of the region's free float market capitalization across 17 Western European countries: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland and the United Kingdom. Constituents from the Parent Index that pass either of the following thematic criteria are eligible for inclusion in the Underlying Index (the "Thematic Selection"):

- RBICS (Revere Business Industry Classifications System) Sector Selection: Companies are evaluated based on their aggregated revenue exposure from the sectors comprising the Themes.
- Innovators Selection Based on Patents: Companies are also evaluated on the number of active, high quality (determined by reference to citations and countries covered) patents that are held for various technologies as classified into the following sub-themes: military, drones, cybersecurity and aero-mobility.

The use of patent data as a factor in selecting companies to include in the Underlying Index may result in certain companies in the defense, cybersecurity and space industries being excluded from the Underlying Index because such companies lack patents on their technologies. The Index Provider seeks to identify companies in the target industries that demonstrate a commitment to innovation.

Constituent companies must also comply with certain industry classification and liquidity criteria. The Underlying Index excludes companies that are classified as belonging to any of the following sectors: health care, financials, real estate, consumer discretionary and consumer staples. The remaining companies are subjected to additional screening based on their average daily traded value ("ADTV") over 1-month and 6-months periods. Only companies with an ADTV of at least 1 million EUR in both periods are included.

Underlying Index – Weighting of Constituent Securities

Companies selected for the Underlying Index are weighted by their free float market capitalization with the weight of each constituent being capped such that the sum of all constituent weights above 4.5% does not exceed 45% of the Underlying Index, and no single constituent weight exceeds 8% of the Underlying Index. Any excess weight is redistributed to the rest of the Underlying Index's constituents that are not already subject to capping under the above rules, pro-rata to their current weights. If the number of constituents is not sufficient to fulfill the capping requirements, the Underlying Index is equal-weighted.

An intra-quarter recapping will be triggered if the largest constituent company exceeds 25% of the Underlying Index or the sum of all constituent weights above 5% exceeds 50% of the Underlying Index. In such case, the Underlying Index is recapped such that no single

constituent weight exceeds 22.5% of the Underlying Index and the sum of all constituent weights above 4.5% does not exceed 45% of the Underlying Index. Any excess weight is redistributed as described above.

Underlying Index – Maintenance

The Underlying Index's list of eligible securities is reviewed annually in June and re-weighted, as necessary, in accordance with its capping requirements at least quarterly in March, June, September and December.

The Fund's Investment Strategy

The fund uses a full replication indexing strategy to seek to track the Underlying Index. As such, the fund invests directly in the component securities of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the fund to acquire component securities due to limited availability or regulatory restrictions, the fund may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The fund may or may not hold all of the securities in the Underlying Index when using a representative sampling indexing strategy.

Under normal circumstances, the fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in component securities (including depositary receipts in respect of such securities) of the Underlying Index. The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. The fund may invest in depositary receipts, including American depositary receipts ("ADRs"), European depositary receipts ("EDRs") and global depositary receipts ("GDRs").

As of November 30, 2025, the Underlying Index consisted of 28 securities, with an average market capitalization of approximately \$5.32 billion and a minimum market capitalization of approximately \$252.94 million, from issuers in the following countries (as indicated by country of domicile): Denmark, France, Germany, Italy, Luxembourg, Norway, Spain, Sweden, and the United Kingdom. As of November 30, 2025, a significant percentage of the Underlying Index was comprised of securities of issuers from the United Kingdom and France. As of November 30, 2025, a significant percentage of the Underlying Index was comprised of issuers in the aerospace and defense sector.

The fund's exposure to particular countries or sectors may change over time to correspond to changes in the Underlying Index.

While the fund is currently classified as "non-diversified" under the Investment Company Act of 1940, Investment Company Act of 1940, as amended (the "1940 Act") it may operate as or become classified as "diversified" over time.

As more fully described under "Underlying Index – Weighting of Constituent Securities" and "Underlying Index – Maintenance," the Underlying Index is reviewed annually in June and re-weighted, as necessary, in accordance with its capping requirements at least quarterly in March, June, September and December. The fund changes its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's review and re-weighting schedules will result in corresponding changes to the fund's schedule of portfolio changes. Any changes made to the Underlying Index in between scheduled reviews or re-weightings (e.g., in the event of a corporate action) will also result in corresponding changes to the fund's portfolio.

The Underlying Index is calculated and maintained by STOXX, Zug, Switzerland. The fund is neither sponsored nor promoted, distributed or in any other manner supported by STOXX, Deutsche Börse Group or their licensors, research partners or data providers. STOXX is an indirect subsidiary of Deutsche Börse Group.

Derivatives. The fund may invest in derivatives, which are financial instruments whose performance is derived, at least in part, from the performance of an underlying asset, security or index. In particular, portfolio management may use futures contracts, stock index futures, options on futures, swap contracts and other types of derivatives in seeking performance that corresponds to the Underlying Index and will not use such instruments for speculative purposes.

Securities lending. The fund may lend securities (up to one-third of total assets) to approved institutions, such as registered broker-dealers, pooled investment vehicles, banks and other financial institutions. In connection with such loans, the fund receives liquid collateral in an amount that is based on the type and value of the securities being lent, with riskier securities generally requiring higher levels of collateral.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information

("SAI"). An investment in the fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency.

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. The market as a whole may not favor the types of investments the fund makes, which could adversely affect a stock's price, regardless of how well the company performs, or the fund's ability to sell a stock at an attractive price. There is a chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising and falling prices. Events in the US and global financial markets, including actions taken by the US Federal Reserve or foreign central banks to stimulate or stabilize economic growth, may at times result in unusually high market volatility which could negatively affect performance. High market volatility may also result from significant shifts in momentum of one or more specific stocks due to unusual increases or decreases in trading activity. Momentum can change quickly, and securities subject to shifts in momentum may be more volatile than the market as a whole and returns on such securities may drop precipitously. To the extent that the fund invests in a particular geographic region, capitalization or sector, the fund's performance may be affected by the general performance of that region, capitalization or sector.

Geographic focus risk. Focusing investments in a single country or few countries, or regions, involves increased political, regulatory and other risks. Market swings in such a targeted country, countries or regions are likely to have a greater effect on fund performance than they would in a more geographically diversified fund.

European investment risk. European financial markets have experienced volatility in recent years and have been adversely affected by concerns about economic downturns, credit rating downgrades, rising government debt level and possible default on or restructuring of government debt in several European countries. A default or debt restructuring by any European country would adversely impact holders of that country's debt, and sellers of credit default swaps linked to that country's creditworthiness. Most countries in Western Europe are members of the European Union (EU), which faces issues involving its membership, structure, procedures and policies.

European countries are also significantly affected by fiscal and monetary controls implemented by the European Economic and Monetary Union (EMU), and it is possible that the timing and substance of these controls may not address the needs of all EMU member countries. Investing in euro-denominated securities also risks exposure to a currency that may not fully reflect the strengths and weaknesses of the disparate economies that comprise Europe.

There is continued concern over member state-level support for the euro, which could lead to certain countries leaving the EMU, the implementation of currency controls, or potentially the dissolution of the euro. The dissolution of the euro could have significant negative effects on European financial markets.

Market disruption risk. Economies and financial markets throughout the world have become increasingly interconnected, which has increased the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. This includes reliance on global supply chains that are susceptible to disruptions resulting from, among other things, war and other armed conflicts, tariffs, extreme weather events, and natural disasters. Such supply chain disruptions can lead to, and have led to, economic and market disruptions that have far-reaching effects on financial markets worldwide. The value of the fund's investments may be negatively affected by adverse changes in overall economic or market conditions, such as the level of economic activity and productivity, unemployment and labor force participation rates, inflation or deflation (and expectations for inflation or deflation), interest rates, demand and supply for particular products or resources including labor, debt levels and credit ratings, and trade policies, among other factors. Such adverse conditions may contribute to an overall economic contraction across entire economies or markets, which may negatively impact the profitability of issuers operating in those economies or markets. In addition, geopolitical and other globally interconnected occurrences, including war and other armed conflicts, terrorism, economic uncertainty or financial crises, contagion, tariffs and trade disputes, government debt crises (including defaults or downgrades) or uncertainty about government debt payments, government shutdowns, public health crises, natural disasters, supply chain disruptions, climate change and related events or conditions, have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Ongoing trade disputes between the United States and other countries may lead to tariffs and investment restrictions, negatively impacting affected companies and their securities. These disputes can also harm the economies of the United States and its trading partners, as well as financial markets overall. Adverse market conditions or disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by adverse market conditions or a particular market disruption, the duration and effects may not be the same for all types of assets.

Current military and other armed conflicts in various geographic regions, including those in Europe and the Middle East, among others, can lead to, and have led to, economic and market disruptions, which may not be

limited to the geographic region in which the conflict is occurring. Such conflicts can also result, and have resulted in some cases, in sanctions being levied by the United States, the European Union and/or other countries against countries or other actors involved in the conflict. In addition, such conflicts and related sanctions can adversely affect regional and global energy, commodities, financial and other markets and thus could affect the value of the fund's investments. The extent and duration of any military or other armed conflict, related sanctions and resulting economic and market disruptions are impossible to predict, but could be substantial.

Other market disruption events include pandemic spread of viruses, such as the novel coronavirus known as COVID-19, which have caused significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions, and may adversely affect the fund and its investments.

In addition, markets are becoming increasingly susceptible to disruption events resulting from the use of new and emerging technologies to engage in cyber-attacks or to take over the websites and/or social media accounts of companies, governmental entities or public officials, or to otherwise pose as or impersonate such, which then may be used to disseminate false or misleading information that can cause volatility in financial markets or for the securities of a particular company, group of companies, industry or other class of assets.

Adverse market conditions or particular market disruptions, such as those discussed above, may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments, as well as US and foreign government actions such as the imposition of tariffs, economic and trade sanctions or embargoes, could undermine the value of the fund's foreign investments, prevent the fund from realizing the full value of its foreign investments or prevent the fund from selling foreign securities it holds. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets. To the extent that the fund invests in non-US dollar denominated foreign securities, changes in currency exchange rates may affect the US dollar value of foreign securities or the income or gain received on these securities.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a

counterparty's legal obligations in certain jurisdictions outside of the US. The foreign investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the foreign securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Risks related to investing in the United Kingdom. Investment in British issuers may subject the fund to regulatory, political, currency, security, and economic risks specific to the United Kingdom. The British economy relies heavily on export of financial services to the US and other European countries. A prolonged slowdown in the financial services sector may have a negative impact on the British economy. In the past, the United Kingdom has been a target of terrorism. Acts of terrorism in the United Kingdom or against British interests abroad may cause uncertainty in the British financial markets and adversely affect the performance of the issuers to which the fund has exposure. The British economy, along with the US and certain other EU economies, experienced a significant economic slowdown during past economic crises.

In a referendum held on June 23, 2016, citizens of the United Kingdom voted to leave the EU, creating economic, political and legal uncertainty in its wake. Consequently, the United Kingdom government, pursuant to the Treaty of Lisbon (the "Treaty"), officially withdrew from the EU on January 31, 2020. The United Kingdom and European Union negotiated a new Trade and Cooperation Agreement (the "Trade Agreement") which took effect on May 1, 2021. The United Kingdom is no longer part of the EU customs union and single market, nor is it subject to EU policies and international agreements. Among other things, the Trade Agreement provides for zero tariffs and zero quotas on all goods that comply with appropriate rules of origin and establishes the treatment and level of access the United Kingdom and EU have agreed to grant each other's service suppliers and investors. In addition to trade in goods and services and investment, the Trade Agreement also covers digital trade, intellectual property, public procurement, aviation and road transport, energy, fisheries,

social security coordination, law enforcement and judicial cooperation in criminal matters, thematic cooperation and participation in EU programs. Even with the Trade Agreement in place, the United Kingdom's withdrawal from the EU may create new barriers to trade in goods and services and to cross-border mobility and exchanges, including with respect to trade in financial services which is not comprehensively addressed in the Trade Agreement and remains subject to negotiation between the United Kingdom and the EU. The long-term impact of the United Kingdom's withdrawal from the EU is still unknown and could have adverse economic and political effects on the United Kingdom, the EU and its member countries, and the global economy, including financial markets and asset valuations.

The United Kingdom has one of the largest economies in Europe, and member countries of the EU are substantial trading partners of the United Kingdom. The City of London's economy is dominated by financial services, some of which may have to move outside of the United Kingdom post-withdrawal (e.g., currency trading, international settlement). With the United Kingdom's exit from the EU, banks may be forced to move staff and comply with two separate sets of rules or lose business to banks in Europe. Furthermore, the withdrawal creates the potential for decreased trade, the possibility of capital outflows, devaluation of the pound sterling, the cost of higher corporate bond spreads due to uncertainty, and the risk that all the above could damage business and consumer spending as well as foreign direct investment. As a result of the withdrawal, the British economy and its currency may be negatively impacted by changes to its economic and political relations with the EU.

The impact of the withdrawal in the long-term is still unknown and could have additional adverse effects on economies, financial markets and asset valuations around the world.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance. The fund may become more focused in particular industries, asset classes or sectors of the economy as a result of changes in the valuation of the fund's investments or fluctuations in the fund's assets, and the fund is not required to reduce such exposures under these circumstances.

Aerospace and defense companies risk. Because companies in the aerospace and defense industries rely to a large extent on US and foreign government demand for their products and services, such companies may be adversely affected by government aerospace and defense spending policies and regulation. Other risks faced by companies in these industries include supply chain issues, significant industry competition, cybersecurity incidents, geopolitical

instability, uncertainties and complexities associated with government procurement processes and contracts, and technological developments, among other things.

Cybersecurity companies risk. Companies in the cybersecurity field face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Cybersecurity companies may have limited product lines, markets, financial resources or personnel. The products of cybersecurity companies may face obsolescence due to rapid technological developments and frequent new product introduction, and such companies may face unpredictable changes in growth rates, competition for the services of qualified personnel and competition from foreign competitors with lower production costs. Companies in the cybersecurity field are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies. Additionally, companies in the cybersecurity field may be the target of cyber-attacks, which, if successful, could significantly or permanently damage a company's reputation, financial condition and ability to conduct business in the future.

Currency risk. Changes in currency exchange rates and the relative value of non-US currencies may affect the value of the fund's investments and the value of your fund shares. Because the fund's NAV is determined on the basis of the US dollar and the fund does not attempt to hedge against changes in the value of non-US currencies, investors may lose money if the foreign currency depreciates against the US dollar, even if the foreign currency value of the fund's holdings in that market increases. Conversely, the dollar value of your investment in the fund may go up if the value of the foreign currency appreciates against the US dollar. The value of the US dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. Therefore, the value of an investment in the fund may also go up or down quickly and unpredictably and investors may lose money.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that

trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss or recognize a gain that may be distributed to shareholders as a taxable distribution. This may be magnified in circumstances where redemptions from the fund may be higher than normal.

Depository receipt risk. Depository receipts involve similar risks to those associated with investments in securities of non-US issuers. Depository receipts also may be less liquid than the underlying shares in their primary trading market.

Derivatives risk. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. Risks associated with derivatives may include the risk that the derivative is not well correlated with the underlying asset, security, index or currency to which it relates; the risk that derivatives may result in losses or missed opportunities; the risk that the fund will be unable to sell the derivative because of an illiquid secondary market; the risk that a counterparty is unwilling or unable to meet its obligation, which risk may be heightened in derivative transactions entered into "over-the-counter" (i.e., not on an exchange or contract market); and the risk that the derivative transaction could expose the fund to the effects of leverage, which could increase the fund's exposure to the market and magnify potential losses.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Non-diversification risk. The fund is classified as non-diversified under the Investment Company Act of 1940, as amended. This means that the fund may invest in securities of relatively few issuers. Thus, the performance of one or a small number of portfolio holdings can affect overall performance.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the Index Provider. There is no assurance that the Index Provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. The Index Provider may cease publication of the Underlying Index or may terminate the license agreement allowing the fund to use the Underlying Index, either of which could have a material adverse effect on the fund. Market disruptions could cause delays in the Underlying Index's reconstitution and rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal reconstitution and rebalancing schedule. Generally, the Index Provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor may have limited ability to detect such errors and neither the Advisor nor its affiliates provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the Index Provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of

errors in the index data, index computation and/or index construction due to unreliable, outdated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when reconstituting or rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. Moreover, the use of a representative sampling investment approach (i.e., investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) may cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax purposes, the fund may sell certain securities, and such sale may cause the fund to recognize a taxable gain or a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers, and in particular emerging markets issuers, than funds that do not track such indices. The fund may also experience operational delays in establishing the necessary accounts and required regulatory approvals to trade, which may delay the fund's ability to hold securities included in the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or other market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. If the markets for the fund's portfolio securities experience decreased liquidity, the trading markets for the fund's shares may also become less liquid with corresponding widening in the bid-ask spreads and differences between the market price and NAV of the fund's shares. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's market price. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund at NAV.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as Authorized Participants ("APs"). Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the

business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers, index provider or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' or index provider's assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers or index provider may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers or index provider could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, index provider, fund counterparties, issuers of securities held by the fund or other market participants.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. A delay in the recovery of loaned securities could interfere with the fund's ability to vote proxies or settle transactions. Delayed settlement may limit the ability of the fund to reinvest the proceeds of a sale of securities or prevent the fund from selling securities at times that may be appropriate to track the

Underlying Index. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

PAST PERFORMANCE

As of the date of this Prospectus, the fund has not yet commenced operations and therefore does not report its performance information. Once available, the fund's performance information will be accessible on the fund's website at Xtrackers.com (the website does not form a part of this prospectus) and will provide some indication of the risks of investing in the fund by showing changes in the fund's performance and by showing how the fund's returns compare with those of a broad measure of market performance. Past performance may not indicate future results.

MANAGEMENT

Investment Advisor

DBX Advisors LLC

Portfolio Managers

Patrick Dwyer, Vice President of DBX Advisors LLC, Director and Senior Portfolio Engineer & Team Lead, Xtrackers, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2026.

Shlomo Bassous, Vice President of DBX Advisors LLC, Director and Senior Portfolio Engineer, Xtrackers, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2026.

Ashif Shaikh, Vice President of DBX Advisors LLC, Vice President and Portfolio Engineer, Xtrackers, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2026.

Daniel Park, Vice President of DBX Advisors LLC, Vice President and Portfolio Engineer, Xtrackers, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2026.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 25,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor. You may incur costs attributable to the difference between the highest price a buyer is

willing to pay to purchase shares of the fund (bid) and the lowest price a seller is willing to accept for shares of the fund (ask) when buying or selling shares (the "bid-ask spread"). Information on the fund's net asset value, market price, premiums and discounts and bid-ask spreads may be found at Xtrackers.com (the website does not form a part of this prospectus).

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when you are tax-exempt or when your investment is in an IRA, 401(k), or other tax-advantaged investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
