Objective and strategy

Xtrackers RREEF Global Natural Resources ETF (the "fund") seeks total return from both capital appreciation and current income. The fund is an actively-managed exchange-traded fund ("ETF") that does not seek to replicate the performance of a specific index. The primary benchmark is the MSCI World Index which tracks the performance of stocks in select developed markets around the world, including the United States. The S&P Global Natural Resources Index is comprised of 90 of the largest globally publicly-traded companies in natural resources and commodities businesses that meet certain investability requirements, offering exposure across three primary commodity-related sectors: agribusiness, energy, and metals & mining.

Performance quoted represents past performance and does not guarantee future results. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Shares are bought and sold at market price (closing price) not net asset value (NAV) and are not individually redeemed from the Fund. Market price returns are based on the midpoint of the bid/ask spread at 4:00 pm Eastern Time (when NAV is normally determined) and do not represent the return you would receive if you traded at other times. To obtain the most recent month-end performance data visit www.Xtrackers.com or call 1-844-851-4255.

Indexes are unmanaged; you cannot invest in an index. Index performance is gross of fees and assumes dividend reinvestment. Inclusion of fees would have reduced returns.

War, terrorism, sanctions, economic uncertainty, trade disputes, public health crises and related geopolitical events have led and, in the future, may lead to significant disruptions in U.S. and world economies and markets, which may lead to increased market volatility and may have significant adverse effects on the fund and its investments.

Risk: Investing involves risk, including the possible loss of principal. Stocks may decline in value. There are special risks associated with natural resources investments, this means that the fund is more vulnerable to the price movements that particularly affect one or more of the various industries and sub industries within the natural resources sector. Funds investing in a single industry, country or in a limited geographic region generally are more volatile than more diversified funds. This fund is non-diversified and can take larger positions in fewer issues, increasing its potential risk. An investment in this fund should be considered only as a supplement to a complete investment program for those investors willing to accept the risks associated with the fund. Please read the prospectus for more information. **Note:** The fund may have a higher degree of portfolio turnover than passively-managed ETFs and is subject to the risk that the investment strategies, techniques and analyses utilized by the Advisor in managing the fund may be flawed and may not produce the desired results.
