Summary Prospectus | December 19, 2025

Xtrackers USD High Yield Corporate Bond ETF

Ticker: HYLB

Stock Exchange: NYSE Arca, Inc.

Before you invest, you may want to review the fund’s prospectus, which contains more information about the fund and its risks. You can find the fund’s prospectus, reports to shareholders, Statement of Additional Information (SAI) and other information about the fund online at go.dws.com/ETFpros. You can also get this information at no cost by e-mailing a request to dbxquestions@list.db.com, calling 1-844-851-4255 or asking your financial representative. The Prospectus and SAI, both dated December 19, 2025, as may be revised or supplemented from time to time, are incorporated by reference into this Summary Prospectus.

INVESTMENT OBJECTIVE

The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market Index.

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy, hold and sell shares. **You may also pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of shares of the fund, which are not reflected in the table and example below.**

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.05
Other Expenses	None
Total annual fund operating expenses	0.05

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$5	\$16	\$28	\$64

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance. During the most recent fiscal year, the fund’s portfolio turnover rate was 29% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market Index (the “Underlying Index”), which is comprised of US dollar-denominated high yield corporate bonds.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as a whole. The fund will invest at least 80% of its total assets (but typically far more) in instruments that comprise the Underlying Index. Due to regulatory changes, effective June 11, 2026, the fund will replace this 80% investment policy and related disclosures set forth in this prospectus. Specifically, effective June 11, 2026, under normal circumstances, the fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in component securities of the Underlying Index.

The high yield bond positions included in the Underlying Index are designed to represent a more liquid selection of bonds than the universe of high yield bonds denominated

in US dollars not included in the Underlying Index. Currently, the bonds eligible for inclusion in the Underlying Index include US dollar-denominated high yield corporate bonds that: (i) are issued by companies with a country of risk classified as developed markets by the index provider; (ii) have a composite rating calculated from available ratings among three rating agencies: Moody's[®] Investors Service, Inc. ("Moody's"), Fitch, Inc. ("Fitch") and Standard & Poor's[®] Financial Services, LLC ("S&P") as sub-investment grade; (iii) are from issuers with at least \$1 billion outstanding face value; (iv) have at least \$400 million of outstanding face value; (v) have an original maturity date at most 15 years; and (vi) have at least one year to maturity (or at least 20 months to maturity for bonds newly added to the Underlying Index). In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund changes its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's reconstitution and rebalance schedule will result in corresponding changes to the fund's schedule of portfolio changes. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG ("Solactive" or "Index Provider"), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2025, the Underlying Index was comprised of 1,264 bonds issued by 549 different issuers with an average amount outstanding of approximately \$886 million and a minimum amount outstanding of approximately \$236 million, from issuers in the following countries (may reflect country of domicile): Australia, Austria, Bermuda, Cameroon, Canada, Cayman Islands, Chile, Colombia, France, Germany, Ghana, Guatemala, Hong Kong, India, Indonesia, Ireland, Israel, Italy, Japan, Jersey Channel Islands, Luxembourg, Macau, the Netherlands, New Zealand, Nigeria, Panama, Peru, Poland, Singapore, Spain, Ukraine, the United Kingdom, the United Republic of Tanzania, the United States and Zambia.

As of October 31, 2025, a significant percentage of the Underlying Index was comprised of issuers from the United States.

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in high yield corporate bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2025, a significant percentage of the Underlying Index was comprised of issuers in the consumer cyclical and communications

sectors. The fund's exposure to particular sectors or countries may change over time to correspond to changes in the Underlying Index.

The Underlying Index is sponsored by Solactive, which is independent of the fund and the Advisor. The Index Provider develops the Underlying Index methodology and determines the composition and relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index. The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend securities (up to one-third of total assets) to approved institutions, such as registered broker-dealers, pooled investment vehicles, banks and other financial institutions. In connection with such loans, the fund receives liquid collateral in an amount that is based on the type and value of the securities being lent, with riskier securities generally requiring higher levels of collateral.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI"). An investment in the fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency.

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. There is a risk that a lack of liquidity or other adverse credit market conditions may hamper the fund's ability to sell the debt securities in which it invests or to find and purchase debt instruments included in the Underlying Index.

Market disruption risk. Economies and financial markets throughout the world have become increasingly interconnected, which has increased the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. This

includes reliance on global supply chains that are susceptible to disruptions resulting from, among other things, war and other armed conflicts, tariffs, extreme weather events, and natural disasters. Such supply chain disruptions can lead to, and have led to, economic and market disruptions that have far-reaching effects on financial markets worldwide. The value of the fund's investments may be negatively affected by adverse changes in overall economic or market conditions, such as the level of economic activity and productivity, unemployment and labor force participation rates, inflation or deflation (and expectations for inflation or deflation), interest rates, demand and supply for particular products or resources including labor, debt levels and credit ratings, and trade policies, among other factors. Such adverse conditions may contribute to an overall economic contraction across entire economies or markets, which may negatively impact the profitability of issuers operating in those economies or markets. In addition, geopolitical and other globally interconnected occurrences, including war and other armed conflicts, terrorism, economic uncertainty or financial crises, contagion, tariffs and trade disputes, government debt crises (including defaults or downgrades) or uncertainty about government debt payments, government shutdowns, public health crises, natural disasters, supply chain disruptions, climate change and related events or conditions, have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Adverse market conditions or disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by adverse market conditions or a particular market disruption, the duration and effects may not be the same for all types of assets.

Current military and other armed conflicts in various geographic regions, including those in Europe and the Middle East, among others, can lead to, and have led to, economic and market disruptions, which may not be limited to the geographic region in which the conflict is occurring. Such conflicts can also result, and have resulted in some cases, in sanctions being levied by the United States, the European Union and/or other countries against countries or other actors involved in the conflict. In addition, such conflicts and related sanctions can adversely affect regional and global energy, commodities, financial and other markets and thus could affect the value of the fund's investments. The extent and duration of any military or other armed conflict, related sanctions and resulting economic and market disruptions are impossible to predict, but could be substantial.

Other market disruption events include pandemic spread of viruses, such as the novel coronavirus known as COVID-19, which have caused significant uncertainty, market volatility, decreased economic and other activity,

increased government activity, including economic stimulus measures, and supply chain disruptions, and may adversely affect the fund and its investments.

In addition, markets are becoming increasingly susceptible to disruption events resulting from the use of new and emerging technologies to engage in cyber-attacks or to take over the websites and/or social media accounts of companies, governmental entities or public officials, or to otherwise pose as or impersonate such, which then may be used to disseminate false or misleading information that can cause volatility in financial markets or for the securities of a particular company, group of companies, industry or other class of assets.

Adverse market conditions or particular market disruptions, such as those discussed above, may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

Inflation risk. Inflation risk is the risk that the real value of certain assets or real income from investments (the value of such assets or income after accounting for inflation) will be less in the future as inflation decreases the value of money. Inflation, and investors' expectation of future inflation, can impact the current value of the fund's portfolio, resulting in lower asset values and losses to shareholders. This risk may be elevated compared to historical market conditions and could be impacted by monetary policy measures and the current interest rate environment.

High yield securities risk. Securities that are rated below investment-grade (commonly referred to as "junk bonds," including those bonds rated lower than "BBB-" by Standard & Poor's Ratings Services and Fitch, Inc. or "Baa3" by Moody's Investors Services, Inc.), or are unrated, may be deemed speculative and may be more volatile than higher rated securities of similar maturity with respect to the issuer's continuing ability to meet principal and interest payments. High-yield debt securities' total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities because there may be no established secondary market. Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities could experience sudden and sharp volatility, which is generally associated more with investments in stocks.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Interest rates can change in response to the supply and demand for credit, government and/or central bank monetary policy and action, inflation rates and other factors. Changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Changing interest rates may have unpredictable effects on markets, may result in heightened market volatility and potential illiquidity and may detract from fund performance to the extent the fund is exposed to such interest rates and/or volatility. Rising interest rates could cause the value of the fund's investments — and therefore its share price as well — to decline. A rising interest rate environment may cause investors to move out of fixed-income securities and related markets on a large scale, which could adversely affect the price and liquidity of such securities and could also result in increased redemptions from the fund.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health, the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any changes or unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments, as well as US and foreign government actions such as the imposition of tariffs, economic and trade sanctions or embargoes, could undermine the value of the fund's foreign investments, prevent the fund from realizing the full value of its foreign investments or prevent the fund from selling foreign securities it holds. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty's legal obligations in certain jurisdictions outside of the US. The foreign investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the foreign securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance. The fund may become more focused in particular industries, asset classes or sectors of the economy as a result of changes in the valuation of the fund's investments or fluctuations in the fund's assets, and the fund is not required to reduce such exposures under these circumstances.

Consumer cyclical sector risk. To the extent that the fund invests significantly in the consumer cyclical sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer cyclical sector. Companies engaged in the consumer cyclical sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of tariffs or import controls, increased competition, depletion of resources and labor relations.

Communications sector risk. To the extent that the fund invests significantly in the communications sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall

condition of the communications sector. Companies in the communications sector can be adversely affected by, among other things, changes in government regulation, intense competition, dependency on patent protection, equipment incompatibility, changing consumer preferences, technological obsolescence, and large capital expenditures and debt burdens.

Restricted securities/Rule 144A securities risk. The fund may invest in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss or recognize a gain that may be distributed to shareholders as a taxable distribution. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods and the value determined for an investment may be materially different from the value realized upon such investment's sale.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the Index Provider. There is no assurance that the Index Provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. The Index Provider may cease publication of the Underlying Index or may terminate the license agreement allowing the fund to use the Underlying Index, either of which could have a material adverse effect on the fund. Market disruptions could cause delays in the Underlying Index's reconstitution and rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal reconstitution and rebalancing schedule. Generally, the Index Provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor may have limited ability to detect such errors and neither the Advisor nor its affiliates provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the Index Provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, outdated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the

fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when reconstituting or rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. Moreover, the use of a representative sampling investment approach (i.e., investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index) may cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax purposes, the fund may sell certain securities, and such sale may cause the fund to recognize a taxable gain or a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices. The fund may also experience operational delays in establishing the necessary accounts and required regulatory approvals to trade, which may delay the fund's ability to hold securities included in the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor

cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or other market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. If the markets for the fund's portfolio securities experience decreased liquidity, the trading markets for the fund's shares may also become less liquid with corresponding widening in the bid-ask spreads and differences between the market price and NAV of the fund's shares. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's market price. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund at NAV.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers, index provider or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' or index provider's assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net

asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers or index provider may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers or index provider could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, index provider, fund counterparties, issuers of securities held by the fund or other market participants.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as Authorized Participants ("APs"). Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. A delay in the recovery of loaned securities could interfere with the fund's ability to vote proxies or settle transactions. Delayed settlement may limit the ability of the fund to reinvest the proceeds of a

sale of securities or prevent the fund from selling securities at times that may be appropriate to track the Underlying Index. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

PAST PERFORMANCE

The bar chart and table below provide some indication of the risks of investing in the fund by showing changes in the fund's performance from year to year and by showing how the fund's average annual returns compare with those of the Underlying Index and a required broad-based securities market index, and may also be compared to a more narrowly based index that the Advisor believes more closely aligns with the fund's investment strategy. The fund's past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. Updated performance information is available on the fund's website at Xtrackers.com (the website does not form a part of this prospectus).

CALENDAR YEAR TOTAL RETURNS (%)

	Returns	Period ending
Best Quarter	7.43%	March 31, 2019
Worst Quarter	-11.52%	March 31, 2020
Year-to-Date	7.02%	September 30, 2025

AVERAGE ANNUAL TOTAL RETURNS

(For periods ended 12/31/2024 expressed as a %)

All after-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of any state or local tax. Your own actual after-tax returns will depend on your tax situation and may differ from what is shown here. After-tax returns are not relevant to investors who hold shares of the fund in tax-deferred accounts such as individual retirement accounts ("IRAs") or employee-sponsored retirement plans.

	Inception Date	1 Year	5 Years	Since Inception
Returns before tax	12/7/2016	7.90	3.38	4.41
After tax on distributions		5.15	1.09	2.05
After tax on distributions and sale of fund shares		4.62	1.56	2.32
Solactive USD High Yield Corporates Total Market Index (reflects no deductions for fees, expenses or taxes)		7.87	3.56	4.63
Bloomberg U.S. Universal Bond Index (reflects no deductions for fees, expenses or taxes)		2.04	0.06	1.65
iBoxx USD Liquid High Yield Index (reflects no deductions for fees, expenses or taxes)		7.91	3.53	4.63

The iBoxx USD Liquid High Yield Index is an index that is more narrowly based than the fund's broad-based index that reflects the sector in which the fund invests.

Nicholas Crociata, CESGA, Vice President of DBX Advisors LLC, Assistant Vice President and Portfolio Engineer, Xtrackers, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2025.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may

trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 100,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor. You may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the fund (bid) and the lowest price a seller is willing to accept for shares of the fund (ask) when buying or selling shares (the "bid-ask spread"). Information on the fund's net asset value, market price, premiums and discounts and bid-ask spreads may be found at Xtrackers.com (the website does not form a part of this prospectus).

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when you are tax-exempt or when your investment is in an IRA, 401(k), or other tax-advantaged investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
