Bond investments are subject to interest rate, credit, liquidity and market risks to varying degrees. When interest rates rise, bond prices generally fall. Credit risk refers to the ability of an issuer to make timely payments of principal and interest. Investing involves risk, including the possible loss of principal. Investments in lower-quality ("junk bonds") and non-rated securities present greater risk of loss than investments in higher-quality securities. Foreign investing involves greater and different risks than investing in U.S. companies, including currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political instability and differing auditing and legal standards. Funds investing in a single industry (or group of industries), country or in a limited geographic region generally are more volatile than more diversified funds. Performance of the Fund may diverge from that of the underlying index due to operating expenses, transaction costs, cash flows, use of sampling strategies or operational inefficiencies. An investment in this Fund should be considered only as a supplement to a complete investment program for those investors willing to accept the risks associated with that fund. See the prospectus for details.
