## Key Risks

- **The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss.**
- The value of an investment in shares will depend on a number of factors including, but not limited to, market and economic conditions, sector, geographical region and political events.
- The Fund is exposed to market movements in a single country or region which may be adversely affected by political or economic developments, government action or natural events that do not affect a fund investing in broader markets.
- The Fund will enter into a derivative with a counterparty. If the counterparty fails to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss.
- The Index is constructed to track the performance of a negative (known as a short) position on the Underlying Index, meaning that the level of the Index should rise when the Underlying Index falls and fall when the Underlying Index rises. The Index is designed to do this on a daily basis only which should not be equated with seeking a short position for periods longer than a day. The performance of the Fund over periods longer than one day may not be inversely proportional or symmetrical with the returns of the Underlying Index.
