### Key Risks

The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss. The Fund is exposed to market movements in a single country or region which may be adversely affected by political or economic developments, government action or natural events that do not affect a fund investing in broader markets. The Fund will enter into a derivative with a counterparty. If the counterparty fails to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss.

The Index is constructed to track the performance of a negative (known as a short) position on the Underlying Index, meaning that the level of the Index should rise when the Underlying Index falls and fall when the Underlying Index rises. The Index is designed to do this on a daily basis only which should not be equated with seeking a short position for periods longer than a day. The performance of the Fund over periods longer than one day may not be inversely proportional or symmetrical with the returns of the Underlying Index. The Index provides a notional exposure to the value and/or return of certain credit derivative transactions which may fall. Markets in these asset classes may at times become volatile or illiquid. The Index may be affected.

### Reference Index key features

The Markit iTraxx® Crossover 5-year Short TOTAL RETURN INDEX aims to reflect the performance of the following market:

- Short 5 years CDS of European entities (pure credit exposure, funded CDS position)
- Non investment grade companies only
- Reference entities that are eligible have a spread at least twice the average spread of the constituents of the iTraxx Non-Financial Index
- 75 European entities based on highest liquidity ranking
- All constituents are equal-weighted

The performance of this index is generated by three factors: minus the running yield of the CDS (carry), minus the change in the CDS prices and the running yield from the funding component (Euro short term rate). Additional information on the Index and the general methodology behind the iTraxx indices can be found on Markit iBoxx website ([www.markit.com](http://www.markit.com)).
