### Key Risks

The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss. The value of an investment in shares will depend on a number of factors including, but not limited to, market and economic conditions, sector, geographical region and political events. The Fund may have exposure to a small number of investments or have exposure to a few countries, industries, sectors of the economy or issuers. This can make the share price of the Fund fluctuate significantly.

The Fund is exposed to market movements in a single country or region which may be adversely affected by political or economic developments, government action or natural events that do not affect a fund investing in broader markets. The Fund has a focus on a single or narrow range of industry, sector or types of companies and performance may not reflect a rise in broader markets.

### Reference Index key features

The MSCI USA Banks 20/35 Capped Index aims to reflect the performance of the following market:

- Large and mid-cap companies listed in the USA, that are classified for the industry group as banks according to the Global Industry Classification Standard (GICS)
- Covers approximately 85% of free-float market capitalisation
- Weighted by free-float adjusted market capitalization with the largest group entity in the index limited to 35% and the weight of the other entities limited to 20% with a buffer of 10% applied on these limits at each index rebalancing
- Reviewed on a quarterly basis and rebalanced at the end of any day on which the 35% and 20% limits (without the buffer) are breached

Additional information on the index, selection and weighting methodology is available at [www.msci.com](http://www.msci.com)
