YOUR INVESTMENT IN A FUND IS NOT A BANK DEPOSIT AND IS NOT INSURED OR GUARANTEED BY THE FEDERAL DEPOSIT INSURANCE CORPORATION OR ANY OTHER GOVERNMENT AGENCY, ENTITY OR PERSON.

Xtrackers USD High Yield Corporate Bond ETF

Ticker: HYLB

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers USD High Yield Corporate Bond ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy, hold and sell shares. You may also pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of shares of the fund, which are not reflected in the table and example below.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.20
Other Expenses	None
Total annual fund operating expenses	0.20
Fee waiver/expense reimbursement	0.05
Total annual fund operating expenses after fee waiver	0.15

The Advisor has contractually agreed through December 16, 2022 to waive a portion of its management fees to the extent necessary to prevent the operating expenses (except for interest expense, taxes, brokerage expenses, distribution fees or expenses, litigation expenses and other extraordinary expenses) of the fund from exceeding 0.15% of the fund’s average daily net assets. This agreement may only be terminated by the fund’s Board (and may not be terminated by the Advisor) prior to that time.

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year

and that the fund’s operating expenses (including one year of capped expenses in each period) remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$15	\$59	\$108	\$250

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance. During the most recent fiscal year, the fund’s portfolio turnover rate was 37% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is comprised of US dollar-denominated high yield corporate bonds.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as a whole. The fund will invest at least 80% of its total assets (but typically far more) in instruments that comprise the Underlying Index.

The high yield bond positions included in the Underlying Index are designed to represent a more liquid selection of bonds than the universe of high yield bonds in the United States not included in the Underlying Index. Currently, the bonds eligible for inclusion in the Underlying Index include US dollar-denominated high yield corporate bonds that: (i) are issued by companies domiciled in countries classified as developed markets by the index provider; (ii) have a composite rating calculated from available ratings among three rating agencies: Moody's[®] Investors Service, Inc. ("Moody's"), Fitch, Inc. ("Fitch") and Standard & Poor's[®] Financial Services, LLC ("S&P") as sub-investment grade; (iii) are from issuers with at least \$1 billion outstanding face value; (iv) have at least \$400 million of outstanding face value; (v) have an original maturity date at most 15 years; and (vi) have at least one year to maturity (or at least 20 months to maturity for bonds newly added to the Underlying Index). In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's reconstitution and rebalance schedule will result in corresponding changes to the fund's reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG ("Solactive" or "Index Provider"), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 1,261 bonds issued by 430 different issuers in the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (88.4%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in high yield corporate bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the communication services (17.3%) and consumer discretionary (16.0%) sectors. The communication services sector includes companies that facilitate communication and offer related content and information

through various mediums. It includes telecom and media and entertainment companies including producers of interactive gaming products and companies engaged in content and information creation or distribution through proprietary platforms. The consumer discretionary sector includes durable goods, apparel, entertainment and leisure, and automobiles. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. There is a risk that a lack of liquidity or other adverse credit market conditions may hamper the fund's ability to sell the debt securities in which it invests or to find and purchase debt instruments included in the Underlying Index.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant

adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and the pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Securities that are rated below investment-grade (commonly referred to as "junk bonds," including those bonds rated lower than "BBB-" by Standard & Poor's Ratings Services and Fitch, Inc. or "Baa3" by Moody's Investors Services, Inc.), or are unrated, may be deemed speculative and may be more volatile than higher rated securities of similar maturity with respect to the issuer's continuing ability to meet principal and interest payments. High-yield debt securities' total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities because there may be no established secondary market. Investments in high-yield debt securities could increase liquidity risk for the fund. In addition,

the market for high-yield debt securities could experience sudden and sharp volatility, which is generally associated more with investments in stocks.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, is expected to be phased out by the end of 2021, although the US Dollar LIBOR phase out may extend past 2021 for certain existing contracts. The fund or the instruments in which the fund invests may be adversely affected by the phase out by, among other things, increased volatility or illiquidity. There remains uncertainty regarding the future use of LIBOR and the nature of any replacement reference rate and, accordingly, it is difficult to predict the impact to the fund of the transition away from LIBOR.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health,

the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty's legal obligations in certain jurisdictions outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory

or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Communication services sector risk. To the extent that the fund invests significantly in the communication services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the communication services sector. Companies in the communications services sector can be adversely affected by, among other things, changes in government regulation, intense competition, dependency on patent protection, equipment incompatibility, changing consumer preferences, technological obsolescence, and large capital expenditures and debt burdens.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Restricted securities/Rule 144A securities risk. The fund may invest in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally

liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment's sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index's rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may

not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the index provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate

from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's

or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

PAST PERFORMANCE

The bar chart and table below provide some indication of the risks of investing in the fund by showing changes in the fund's performance from year to year and by showing how the fund's average annual returns compare with those of the Underlying Index and a broad measure of market performance. The fund's past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. Updated performance information is available on the fund's website at Xtrackers.com (the website does not form a part of this prospectus).

CALENDAR YEAR TOTAL RETURNS (%)

	Returns	Period ending
Best Quarter	7.43%	March 31, 2019
Worst Quarter	-11.52%	March 31, 2020
Year-to-Date	3.44%	September 30, 2021

AVERAGE ANNUAL TOTAL RETURNS

(For periods ended 12/31/2020 expressed as a %)

All after-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of any state or local tax. Your own actual after-tax returns will depend on your tax situation and may differ from what is shown here. After-tax returns are not relevant to investors who hold shares of the fund in tax-deferred accounts such as individual retirement accounts ("IRAs") or employee-sponsored retirement plans.

	Inception Date	1 Year	Since Inception
Returns before tax	12/7/2016	4.87	5.81
After tax on distributions		2.56	3.37
After tax on distributions and sale of fund shares		2.79	3.35
Solactive USD High Yield Corporates Total Market Index		5.17	6.10
iBoxx USD Liquid High Yield Index		4.66	6.12

MANAGEMENT

Investment Advisor

DBX Advisors LLC

Portfolio Managers

Bryan Richards, CFA, Vice President of DBX Advisors LLC and Head of Portfolio Engineering, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2016.

Brandon Matsui, CFA, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2016.

Alexander Bridgeforth, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2016.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 100,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor. You may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the fund (bid) and the lowest price a seller is willing to accept for shares of the fund (ask) when buying or selling shares (the "bid-ask spread"). Information on the fund's net asset value, market price, premiums and discounts and bid-ask spreads may be found at Xtrackers.com.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-advantaged investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Xtrackers Short Duration High Yield Bond ETF

Ticker: SHYL

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers Short Duration High Yield Bond ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market 0-5 Year Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy, hold and sell shares. You may also pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of shares of the fund, which are not reflected in the table and example below.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.20
Other Expenses	None
Total annual fund operating expenses	0.20

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be

imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$20	\$64	\$113	\$255

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance. During the most recent fiscal year, the fund’s portfolio turnover rate was 52% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is designed to track the performance of short-term publicly issued US dollar-denominated below investment grade corporate debt.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as a whole. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

The bonds eligible for inclusion in the Underlying Index must: (i) have a composite rating calculated from available ratings among at least one of these three rating agencies: Moody’s® Investors Services (“Moody’s”), Standard & Poor’s® Financial Services, LLC (“S&P”) and Fitch, Inc. (“Fitch”) as sub-investment grade; (ii) be from issuers with

at least \$1 billion outstanding face value; (iii) have at least \$400 million of outstanding face value; (iv) have an original maturity date at most 15 years; and (v) have less than or equal to five years to maturity. In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's reconstitution and rebalance schedule will result in corresponding changes to the fund's reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG ("Solactive" or "Index Provider"), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 487 bonds issued by 255 different issuers from the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (87%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in high yield bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the consumer discretionary (18.4%) sector. The consumer discretionary sector includes durable goods, apparel, entertainment and leisure, and automobiles. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. There is a risk that a lack of liquidity or other adverse credit market conditions may hamper the fund's ability to sell the debt securities in which it invests or to find and purchase debt instruments included in the Underlying Index.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability

of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and the pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this “MAIN RISKS” section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Securities that are rated below investment-grade (commonly referred to as “junk bonds,” including those bonds rated lower than “BBB-” by Standard & Poor’s Ratings Services and Fitch, Inc. or “Baa3” by Moody’s Investors Services, Inc.), or are unrated, may be deemed speculative and may be more volatile than higher rated securities of similar maturity with respect to the issuer’s continuing ability to meet principal and interest payments. High-yield debt securities’ total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities because there may be no established secondary market. Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities could experience sudden and sharp volatility, which is generally associated more with investments in stocks.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund’s investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty’s legal obligations in certain jurisdictions outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management’s estimate of its value. For the same reason, it may at times be difficult to value the fund’s foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund’s portfolio may change on days when shareholders will not be able to purchase or sell the fund’s shares.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund’s performance.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund’s performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund’s debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods

when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, is expected to be phased out by the end of 2021, although the US Dollar LIBOR phase out may extend past 2021 for certain existing contracts. The fund or the instruments in which the fund invests may be adversely affected by the phase out by, among other things, increased volatility or illiquidity. There remains uncertainty regarding the future use of LIBOR and the nature of any replacement reference rate and, accordingly, it is difficult to predict the impact to the fund of the transition away from LIBOR.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health, the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Restricted securities/Rule 144A securities risk. The fund may invest in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly

how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment's sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index's rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the index provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may

cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the

applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled

"Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

PAST PERFORMANCE

The bar chart and table below provide some indication of the risks of investing in the fund by showing changes in the fund's performance from year to year and by showing how the fund's average annual returns compare with those of the Underlying Index and a broad measure of market performance. The fund's past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. Updated performance information is available on the fund's website at Xtrackers.com (the website does not form a part of this prospectus).

CALENDAR YEAR TOTAL RETURNS (%)

	Returns	Period ending
Best Quarter	5.97%	June 30, 2020
Worst Quarter	-10.96%	March 31, 2020
Year-to-Date	4.07%	September 30, 2021

AVERAGE ANNUAL TOTAL RETURNS

(For periods ended 12/31/2020 expressed as a %)

All after-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of any state or local tax. Your own actual after-tax returns will depend on your tax situation and may differ from what is shown here. After-tax returns are not relevant to investors who hold shares of the fund in tax-deferred accounts such as individual retirement accounts ("IRAs") or employee-sponsored retirement plans.

	Inception Date	1 Year	Since Inception
Returns before tax	1/10/2018	3.46	4.22
After tax on distributions		0.81	1.74
After tax on distributions and sale of fund shares		1.95	2.14

Brandon Matsui, CFA, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

Alexander Bridgeforth, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem

shares that have been aggregated into blocks of 50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor. You may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the fund (bid) and the lowest price a seller is willing to accept for shares of the fund (ask) when buying or selling shares (the "bid-ask spread"). Information on the fund's net asset value, market price, premiums and discounts and bid-ask spreads may be found at Xtrackers.com.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-advantaged investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Xtrackers High Beta High Yield Bond ETF

Ticker: HYUP

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers High Beta High Yield Bond ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market High Beta Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy, hold and sell shares. You may also pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of shares of the fund, which are not reflected in the table and example below.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.35
Other Expenses	None
Total annual fund operating expenses	0.35
Fee waiver/expense reimbursement	0.15
Total annual fund operating expenses after fee waiver	0.20

The Advisor has contractually agreed through December 16, 2022 to waive a portion of its management fees to the extent necessary to prevent the operating expenses (except for interest expense, taxes, brokerage expenses, distribution fees or expenses, litigation expenses and other extraordinary expenses) of the fund from exceeding 0.20% of the fund’s average daily net assets. This agreement may only be terminated by the fund’s Board (and may not be terminated by the Advisor) prior to that time.

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year

and that the fund’s operating expenses (including one year of capped expenses in each period) remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$20	\$97	\$181	\$428

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance. During the most recent fiscal year, the fund’s portfolio turnover rate was 98% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is comprised of US dollar-denominated high yield corporate bonds that potentially have higher beta to the overall high yield corporate bond market.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as

a whole. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

The Underlying Index is designed to track the performance of the segment of the US dollar-denominated high yield corporate bond market that exhibits higher overall beta to the broader high yield corporate fixed income market. Beta is a measure of a security's price sensitivity (i.e., volatility); it reflects the rate of change in a security's price that results from overall market movements. This is accomplished through reviewing the yields of all securities in the eligible universe on a sector basis. Higher yielding bonds tend to exhibit higher beta. If an individual security's yield is higher than that of its sector's median yield, it will be eligible for inclusion in the Underlying Index. Currently, the bonds included in the Underlying Index include US dollar-denominated high yield corporate bonds that: (i) have a composite rating calculated from available ratings among at least one of these three rating agencies: Moody's[®] Investors Services ("Moody's"), Standard & Poor's[®] Financial Services, LLC ("S&P") and Fitch, Inc. ("Fitch") as sub-investment grade; (ii) are from issuers with at least \$1 billion outstanding face value; (iii) have at least \$400 million of outstanding face value; (iv) have an original maturity date at most 15 years; and (v) have at least one year to maturity (or at least 20 months to maturity for bonds newly added to the Underlying Index). In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's reconstitution and rebalance schedule will result in corresponding changes to the fund's reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG ("Solactive" or "Index Provider"), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 644 bonds issued by 241 different issuers from the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (85.1%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes in high yield bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the communication services (19.6%) and consumer discretionary (16.3%) sectors. The communication services sector includes companies that facilitate communication and offer related content and information through various mediums. It includes telecom and media and entertainment companies including producers of interactive gaming products and companies engaged in content and information creation or distribution through proprietary platforms. The consumer discretionary sector includes durable goods, apparel, entertainment and leisure, and automobiles. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. There is a risk that a lack of liquidity or other adverse credit market conditions may hamper the

fund's ability to sell the debt securities in which it invests or to find and purchase debt instruments included in the Underlying Index.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and the pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Securities that are rated below investment-grade (commonly referred to as "junk bonds," including those bonds rated lower than "BBB-" by Standard & Poor's Ratings Services and Fitch, Inc. or "Baa3" by Moody's Investors Services, Inc.), or are unrated, may be deemed speculative and may be more volatile than higher rated securities of similar maturity with respect to the issuer's continuing ability to meet principal and interest payments. High-yield debt securities' total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions

and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities because there may be no established secondary market. Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities could experience sudden and sharp volatility, which is generally associated more with investments in stocks.

High beta risk. High beta investing entails investing in securities that are more sensitive to changes in the market, and thus more volatile based on historical market index data. The fund may be more volatile since it will track the Underlying Index, which is designed to provide exposure to securities that have a higher beta and thus more volatility. Volatile securities may be subject to sharp swings in value, and may change unpredictably, affecting the value of such securities and, consequently, the value of the Shares. Although the Underlying Index was created to seek higher volatility than the broader high yield corporate fixed income market, there is no guarantee that the Underlying Index's methodology will be successful in doing so.

Distressed securities risk. Distressed securities are speculative and involve substantial risks in addition to the risks of investing in junk bonds. The fund will generally not receive interest payments on the distressed securities and may incur costs to protect its investment. In addition, distressed securities involve the substantial risk that principal will not be repaid. These securities may present a substantial risk of default or may be in default at the time of investment. The fund may incur additional expenses to the extent it is required to seek recovery upon a default in the payment of principal of or interest on its portfolio holdings. In any reorganization or liquidation proceeding relating to a portfolio company, the fund may lose its entire investment or may be required to accept cash or securities with a value less than its original investment. Distressed securities and any securities received in an exchange for such securities may be subject to restrictions on resale.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty's legal obligations in certain jurisdictions

outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health, the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Communication services sector risk. To the extent that the fund invests significantly in the communication services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the communication services sector. Companies in the communications services sector can be adversely affected by, among other things, changes in government regulation, intense competition, dependency on patent protection, equipment incompatibility, changing consumer preferences, technological obsolescence, and large capital expenditures and debt burdens.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Restricted securities/Rule 144A securities risk. The fund may invest in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933

Act”), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund’s 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment’s sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management

generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index’s rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index’s stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the index provider’s errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund’s performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund’s return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund’s securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund’s NAV to the extent not offset by the transaction fee payable by an “Authorized Participant” (“AP”). Market disruptions and regulatory restrictions could

have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences

between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

PAST PERFORMANCE

The bar chart and table below provide some indication of the risks of investing in the fund by showing changes in the fund's performance from year to year and by showing how the fund's average annual returns compare with those of the Underlying Index and a broad measure of market performance. The fund's past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. Updated performance information is available on the fund's website at Xtrackers.com (the website does not form a part of this prospectus).

CALENDAR YEAR TOTAL RETURNS (%)

	Returns	Period ending
Best Quarter	8.80%	March 31, 2019
Worst Quarter	-14.64%	March 31, 2020
Year-to-Date	4.63%	September 30, 2021

AVERAGE ANNUAL TOTAL RETURNS

(For periods ended 12/31/2020 expressed as a %)

All after-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of any state or local tax. Your own actual after-tax returns will depend on your tax situation and may differ from what is shown here. After-tax returns are not relevant to investors who hold shares of the fund in tax-deferred accounts such as individual retirement accounts ("IRAs") or employee-sponsored retirement plans.

	Inception Date	1 Year	Since Inception
Returns before tax	1/11/2018	5.67	5.80
After tax on distributions		2.59	2.85
After tax on distributions and sale of fund shares		3.20	3.12
Solactive USD High Yield Corporates Total Market High Beta Index		5.22	5.72
Solactive USD High Yield Corporates Total Market Index		5.17	5.58

DBX Advisors LLC

Portfolio Managers

Bryan Richards, CFA, Vice President of DBX Advisors LLC and Head of Portfolio Engineering, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

Brandon Matsui, CFA, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

Alexander Bridgeforth, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual fund shares may only be purchased and sold through a brokerage firm. The price of

fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of 50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor. You may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the fund (bid) and the lowest price a seller is willing to accept for shares of the fund (ask) when buying or selling shares (the "bid-ask spread"). Information on the fund's net asset value, market price, premiums and discounts and bid-ask spreads may be found at Xtrackers.com.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-advantaged investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Xtrackers Low Beta High Yield Bond ETF

Ticker: HYDW

Stock Exchange: NYSE Arca, Inc.

INVESTMENT OBJECTIVE

Xtrackers Low Beta High Yield Bond ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market Low Beta Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy, hold and sell shares. You may also pay other fees, such as brokerage commissions and other fees to financial intermediaries on the purchase and sale of shares of the fund, which are not reflected in the table and example below.

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management fee	0.25
Other Expenses	None
Total annual fund operating expenses	0.25
Fee waiver/expense reimbursement	0.05
Total annual fund operating expenses after fee waiver	0.20

The Advisor has contractually agreed through December 16, 2022 to waive a portion of its management fees to the extent necessary to prevent the operating expenses (except for interest expense, taxes, brokerage expenses, distribution fees or expenses, litigation expenses and other extraordinary expenses) of the fund from exceeding 0.20% of the fund’s average daily net assets. This agreement may only be terminated by the fund’s Board (and may not be terminated by the Advisor) prior to that time.

EXAMPLE

This Example is intended to help you compare the cost of investing in the fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year

and that the fund’s operating expenses (including one year of capped expenses in each period) remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of shares of the fund. It also does not include the transaction fees on purchases and redemptions of Creation Units (defined herein), because those fees will not be imposed on retail investors. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$20	\$75	\$136	\$313

PORTFOLIO TURNOVER

The fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may mean higher taxes if you are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example, and can affect the fund’s performance. During the most recent fiscal year, the fund’s portfolio turnover rate was 88% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is comprised of US dollar-denominated high yield corporate bonds that potentially have lower beta to the overall high yield corporate bond market.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as

a whole. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

The Underlying Index is designed to track the performance of the segment of the US dollar-denominated high yield corporate bond market that exhibits lower overall beta to the broader high yield corporate fixed income market. Beta is a measure of a security's price sensitivity (i.e., volatility); it reflects the rate of change in a security's price that results from overall market movements. This is accomplished through reviewing the yields of all securities in the eligible universe on a sector basis. Lower yielding bonds tend to exhibit lower beta. If an individual security's yield is lower than that of its sector's median yield, it will be eligible for inclusion in the Underlying Index. Currently, the bonds included in the Underlying Index include US dollar-denominated high yield corporate bonds that: (i) have a composite rating calculated from available ratings among at least one of these three rating agencies: Moody's[®] Investors Services ("Moody's"), Standard & Poor's[®] Financial Services, LLC ("S&P") and Fitch, Inc. ("Fitch") as sub-investment grade; (ii) are from issuers with at least \$1 billion outstanding face value; (iii) have at least \$400 million of outstanding face value; (iv) have an original maturity date at most 15 years; and (v) have at least one year to maturity (or at least 20 months to maturity for bonds newly added to the Underlying Index). In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's reconstitution and rebalance schedule will result in corresponding changes to the fund's reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG ("Solactive" or "Index Provider"), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 617 bonds issued by 241 different issuers from the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (91.6%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes in high yield bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the consumer discretionary (16.1%) and communication services (15.3%) sectors. The consumer discretionary sector includes durable goods, apparel, entertainment and leisure, and automobiles. The communication services sector includes companies that facilitate communication and offer related content and information through various mediums. It includes telecom and media and entertainment companies including producers of interactive gaming products and companies engaged in content and information creation or distribution through proprietary platforms. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About Fund Strategies, Underlying Index Information and Risks" and in the Statement of Additional Information ("SAI").

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. There is a risk that a lack of liquidity or other adverse credit market conditions may hamper the

fund's ability to sell the debt securities in which it invests or to find and purchase debt instruments included in the Underlying Index.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and the pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Securities that are rated below investment-grade (commonly referred to as "junk bonds," including those bonds rated lower than "BBB-" by Standard & Poor's Ratings Services and Fitch, Inc. or "Baa3" by Moody's Investors Services, Inc.), or are unrated, may be deemed speculative and may be more volatile than higher rated securities of similar maturity with respect to the issuer's continuing ability to meet principal and interest payments. High-yield debt securities' total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions

and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities because there may be no established secondary market. Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities could experience sudden and sharp volatility, which is generally associated more with investments in stocks.

Low beta risk. Low beta investing entails investing in securities that are less sensitive to changes in the market, and thus are less volatile based on historical market index data. Although the Underlying Index was created to seek lower volatility than the broader high yield corporate fixed income market, there is no guarantee that the Underlying Index's methodology will be successful in doing so. The Underlying Index may be unsuccessful in creating an index that minimizes volatility, and there is a risk that the fund may experience more than minimum volatility. Securities in the fund's portfolio may be subject to price volatility and the prices may not be any less volatile than the broader high yield corporate fixed income market, and could be more volatile.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty's legal obligations in certain jurisdictions outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open

on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, is expected to be phased out by the end of 2021, although the US Dollar LIBOR phase out may extend past 2021 for certain existing contracts. The fund or the instruments in which the fund invests may be adversely affected by the phase out by, among other things, increased volatility or illiquidity. There remains uncertainty regarding the future use of LIBOR and the nature of any replacement reference rate and, accordingly, it is difficult to predict the impact to the fund of the transition away from LIBOR.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health,

the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Communication services sector risk. To the extent that the fund invests significantly in the communication services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the communication services sector. Companies in the communications services sector can be adversely affected by, among other things, changes in government regulation, intense competition, dependency on patent protection, equipment incompatibility, changing consumer preferences, technological obsolescence, and large capital expenditures and debt burdens.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Restricted securities/Rule 144A securities risk. The fund may invest in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for

Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment's sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index's rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the index provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may

cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units (defined below), the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. If market makers exit the business or are unable to continue making markets in fund shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the fund may be traded in markets that close at a different time than the exchange on which the fund's shares trade. Liquidity in those securities may be reduced after the

applicable closing times. Accordingly, during the time when the exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled

“Buying and Selling Shares”). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

PAST PERFORMANCE

The bar chart and table below provide some indication of the risks of investing in the fund by showing changes in the fund’s performance from year to year and by showing how the fund’s average annual returns compare with those of the Underlying Index and a broad measure of market performance. The fund’s past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. Updated performance information is available on the fund’s website at Xtrackers.com (the website does not form a part of this prospectus).

CALENDAR YEAR TOTAL RETURNS (%)

	Returns	Period ending
Best Quarter	6.99%	June 30, 2020
Worst Quarter	-8.09%	March 31, 2020
Year-to-Date	2.31%	September 30, 2021

AVERAGE ANNUAL TOTAL RETURNS

(For periods ended 12/31/2020 expressed as a %)

All after-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of any state or local tax. Your own actual after-tax returns will depend on your tax situation and may differ from what is shown here. After-tax returns are not relevant to investors who hold shares of the fund in tax-deferred accounts such as individual retirement accounts (“IRAs”) or employee-sponsored retirement plans.

	Inception Date	1 Year	Since Inception
Returns before tax	1/11/2018	5.23	5.18
After tax on distributions		3.28	3.25
After tax on distributions and sale of fund shares		3.04	3.11
Solactive USD High Yield Corporates Total Market Low Beta Index		4.83	5.14
Solactive USD High Yield Corporates Total Market Index		5.17	5.58

Alexander Bridgeforth, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

PURCHASE AND SALE OF FUND SHARES

The fund is an exchange-traded fund (commonly referred to as an “ETF”). Individual fund shares may only be purchased and sold through a brokerage firm. The price of fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The fund will only issue or redeem shares that have been aggregated into blocks of

50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with ALPS Distributors, Inc., the fund's distributor. You may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the fund (bid) and the lowest price a seller is willing to accept for shares of the fund (ask) when buying or selling shares (the "bid-ask spread"). Information on the fund's net asset value, market price, premiums and discounts and bid-ask spreads may be found at Xtrackers.com.

TAX INFORMATION

The fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is in an IRA, 401(k), or other tax-advantaged investment plan. Any withdrawals you make from such tax-advantaged investment plans, however, may be taxable to you.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT FUND STRATEGIES, UNDERLYING INDEX INFORMATION AND RISKS

Xtrackers USD High Yield Corporate Bond ETF

INVESTMENT OBJECTIVE

Xtrackers USD High Yield Corporate Bond ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market Index (the “Underlying Index”).

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is comprised of US dollar-denominated high yield corporate bonds.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as a whole. The fund will invest at least 80% of its total assets (but typically far more) in instruments that comprise the Underlying Index.

The high yield bond positions included in the Underlying Index are designed to represent a more liquid selection of bonds than the universe of high yield bonds in the United States not included in the Underlying Index. Currently, the bonds eligible for inclusion in the Underlying Index include US dollar-denominated high yield corporate bonds that: (i) are issued by companies domiciled in countries classified as developed markets by the index provider; (ii) have a composite rating calculated from available ratings among three rating agencies: Moody’s[®] Investors Service, Inc. (“Moody’s”), Fitch, Inc. (“Fitch”) and Standard & Poor’s[®] Financial Services, LLC (“S&P”) as sub-investment grade; (iii) are from issuers with at least \$1 billion outstanding face value; (iv) have at least \$400 million of outstanding face value; (v) have an original maturity date at most 15 years; and (vi) have at least one year to maturity (or at least 20 months to maturity for

bonds newly added to the Underlying Index). In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the “1933 Act”). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index’s reconstitution and rebalance schedule will result in corresponding changes to the fund’s reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG (“Solactive” or “Index Provider”), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 1,261 bonds issued by 430 different issuers in the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (88.4%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in high yield corporate bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the communication services (17.3%) and consumer discretionary (16.0%) sectors. The communication services sector includes companies that facilitate communication and offer related content and information through various mediums. It includes telecom and media and entertainment companies including producers of interactive gaming products and companies engaged in content and information creation or distribution through proprietary platforms. The consumer discretionary sector

includes durable goods, apparel, entertainment and leisure, and automobiles. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the Investment Company Act of 1940, as amended (the "1940 Act"), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other types of options and swaps related to its Underlying Index. The fund will not use futures or options for speculative purposes.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

Solactive USD High Yield Corporates Total Market Index

Number of Components: approximately (1,261)

Index Description. The Solactive USD High Yield Corporates Total Market Index is designed to track the performance of a basket of US dollar-denominated high yield liquid corporate bonds.

The universe of bonds eligible for inclusion in the Underlying Index are those bonds that fulfill the following conditions:

- Corporate debt (excluding government debt, quasi-government debt, debt guaranteed or backed by governments, Regulation S securities, municipal bonds, Brady bonds and restructured bonds, private placements except 144A series);

- Bonds that are classified as fixed coupon bonds, step-up bonds driven by rating or where the coupon schedule is known at issuance, medium term notes ("MTNs"), callable and puttable bonds and 144A securities (excluding zero coupon bonds, floating/variable coupon bonds, convertibles, inflation-linked bonds, perpetual bonds, accrued only bonds, Eurobonds, sinker, step-up bonds not driven by rating or step-up bonds where the coupon schedule is not known at issuance, pay-in-kind bonds);
- Covered bonds and notes may not be included in the Underlying Index;
- Country of risk of the bond can be defined as developed markets (classified by the Index Provider) to include the following countries as of October 31, 2021: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States;
- Time to maturity must be at least one year (or at least 20 months to maturity for bonds newly added to the Underlying Index);
- Time to maturity at issuance must be 15 years or less;
- Bonds must be US dollar denominated;
- Amount outstanding of each bond must be at least \$400 million;
- Issuer must have at least \$1 billion in total principal amount outstanding; and
- Must have a composite rating calculated from available ratings among three rating agencies: Moody's, Fitch and S&P as sub-investment grade.

Bonds for which a full call or a full tender offer is announced with the effective date in the upcoming month will be excluded from the index composition on the selection day. For the avoidance of doubt, bonds which will not be fully redeemed (due to a call/tender) during the next month and meet all other index criteria are eligible to join the index on the next selection day.

The Underlying Index is rebalanced on the last business day of each month (the "Adjustment Day"). The components that will be added to or deleted from the Underlying Index on the Adjustment Day are determined three days prior to the Adjustment Day (the "Selection Day"). Newly-issued bonds that meet the requirements are generally added; whereas, any Underlying Index components that no longer meet the above requirements on the Selection Day are removed from the Underlying Index on the Adjustment Day.

The composition of the Underlying Index is ordinarily adjusted monthly on the Adjustment Day. On each Adjustment Day each issuer is weighted proportionally according to its market capitalization. The percentage weight of any issuer is capped at 3% on each Selection Day. The excess weight is allocated proportionally to all index components whose percentage weights are not capped. The Underlying

Index is reconstituted and rebalanced on a monthly basis. During extraordinary market conditions, the Index Provider may delay any scheduled reconstitution and rebalancing of the Underlying Index. During any such delay it is possible that the Underlying Index will deviate from the Underlying Index's stated methodology.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective.

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of

the COVID-19 pandemic, and the pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this "MAIN RISKS" section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Exposure to high yield (lower rated) debt instruments (also known as "junk bonds") may involve greater levels of credit, prepayment, liquidity and valuation risk than for higher rated instruments. High yield debt instruments may be more sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments are considered speculative with respect to the issuer's continuing ability to make principal and interest payments and, therefore, such instruments generally involve greater risk of default or price changes than higher rated debt instruments. High-yield debt securities' total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities as there may be no established secondary market. Even if an established secondary market exists, less active markets may diminish the fund's ability to obtain accurate market quotations when valuing the portfolio securities and thereby give rise to valuation risk.

Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities can experience sudden and sharp volatility, which is generally associated more with investments in stocks. High yield debt instruments may be more sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments may also present risks based on payment expectations. For example, these instruments may contain redemption or call provisions. If an issuer exercises these provisions in a declining interest rate market, the fund would have to replace the security with a lower yielding security, resulting in a decreased return for investors. If the issuer of a security is in default with respect to interest or principal payments, the issuer's security could lose its entire value. Furthermore, the transaction costs associated with

the purchase and sale of high yield debt instruments may vary greatly depending upon a number of factors and may adversely affect the fund's performance.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, is expected to be phased out by the end of 2021, although the US Dollar LIBOR phase out may extend past 2021 for certain existing contracts. The fund or the instruments in which the fund invests may be adversely affected by the phase out by, among other things, increased volatility or illiquidity. There remains uncertainty regarding the future use of LIBOR and the nature of any replacement reference rate and, accordingly, it is difficult to predict the impact to the fund of the transition away from LIBOR.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health,

the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund's investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty's legal obligations in certain jurisdictions outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory

or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Communication services sector risk. To the extent that the fund invests significantly in the communication services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the communication services sector. Companies in the communications services sector can be adversely affected by, among other things, changes in government regulation, intense competition, dependency on patent protection, equipment incompatibility, changing consumer preferences, technological obsolescence, and large capital expenditures and debt burdens.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Restricted securities/Rule 144A securities risk. The fund may invest its assets in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally

liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Liquidity risk may result from the lack of an active market and the reduced number and capacity of traditional market participants to make a market in fixed income securities. Liquidity risk also may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income mutual funds or ETFs may be higher than normal, causing increased supply in the market due to selling activity. It may also be the case that other market participants may be attempting to liquidate fixed-income holdings at the same time as the fund, causing increased supply in the market and contributing to liquidity risk and downward pricing pressure.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment's sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Secondary markets may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may prevent the fund from being able to realize full value and thus sell a security for its full valuation. This could cause a material decline in the fund's net asset value.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index's rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the index provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may

cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code of 1986, as amended, may also impact the fund's ability to replicate the performance of the Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not included in the Underlying Index, the fund's return may not correlate as well with the returns of the Underlying Index as would be the case if the fund purchased all the securities in the Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

For purposes of calculating the fund's net asset value, the value of assets denominated in non-US currencies is converted into US dollars using prevailing market rates on the date of valuation as quoted by one or more data service providers. This conversion may result in a difference between the prices used to calculate the fund's net asset value and the prices used by the Underlying Index, which, in turn, could result in a difference between the fund's performance and the performance of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand

forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

In addition, the securities held by the fund may be traded in markets that close at a different time than an exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when an exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. More generally, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and

market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities

held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of the fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to

honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into "over-the-counter" (i.e., not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund's rights as a creditor (e.g., the fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund's derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

INVESTMENT OBJECTIVE

Xtrackers Short Duration High Yield Bond ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market 0-5 Year Index (the “Underlying Index”).

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is designed to track the performance of short-term publicly issued US dollar-denominated below investment grade corporate debt.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as a whole. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

The bonds eligible for inclusion in the Underlying Index must: (i) have a composite rating calculated from available ratings among at least one of these three rating agencies: Moody’s® Investors Services (“Moody’s”), Standard & Poor’s® Financial Services, LLC (“S&P”) and Fitch, Inc. (“Fitch”) as sub-investment grade; (ii) be from issuers with at least \$1 billion outstanding face value; (iii) have at least \$400 million of outstanding face value; (iv) have an original maturity date at most 15 years; and (v) have less than or equal to five years to maturity. In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the “1933 Act”). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index’s reconstitution and rebalance schedule will result in corresponding changes to the fund’s reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG (“Solactive” or “Index Provider”), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 487 bonds issued by 255 different issuers from the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands,

New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (87%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in high yield bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the consumer discretionary (18.4%) sector. The consumer discretionary sector includes durable goods, apparel, entertainment and leisure, and automobiles. To the extent that the fund tracks the Underlying Index, the fund’s investment in certain sectors or countries may change over time.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the Investment Company Act of 1940, as amended (the “1940 Act”), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other types of options and swaps related to its Underlying Index. The fund will not use futures or options for speculative purposes.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

Solactive USD High Yield Corporates Total Market 0-5 Year Index

Number of Components: approximately (487)

Index Description. Solactive USD High Yield Corporates Total Market 0-5 Year Index is designed to track the performance of short-term publicly issued US dollar-denominated below investment grade corporate debt.

The universe of bonds eligible for inclusion in the Underlying Index are those bonds that fulfill the following conditions:

- Corporate debt (excluding government debt, quasi-government debt, debt guaranteed or backed by governments, Regulation S securities, municipal bonds, Brady bonds and restructured bonds, private placements except 144A series);
- Bonds that are classified as fixed coupon bonds, step-up bonds driven by rating or where the coupon schedule is known at issuance, medium term notes (“MTNs”), callable and putable bonds and 144A securities (excluding zero coupon bonds, floating/variable coupon bonds, convertibles, inflation-linked bonds, perpetual bonds, accrued only bonds, Eurobonds, sinker, step-up bonds not driven by rating or step-up bonds where the coupon schedule is not known at issuance, pay-in-kind bonds);
- Covered bonds and notes may not be included in the Underlying Index;
- Country of risk of the bond can be defined as developed markets (classified by the Index Provider) to include the following countries as of October 31, 2021: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States;
- Time to maturity must be less than or equal to five years;
- Time to maturity at issuance must be 15 years or less;
- Bonds must be US dollar denominated;
- Amount outstanding of each bond must be at least \$400 million;
- Issuer must have at least \$1 billion in total principal amount outstanding;
- Must be rated by at least one of Fitch, Moody’s or S&P. The average rating calculated from available ratings should be sub-investment grade; and
- Bonds must be priced by a designated pricing provider and must have a price of 20 or higher.

Bonds for which a full call or a full tender offer is announced with the effective date in the upcoming month will be excluded from the index composition on the selection day. For the avoidance of doubt, bonds which will not be fully redeemed (due to a call/tender) during the next month and meet all other index criteria are eligible to join the index on the next selection day.

The Underlying Index is rebalanced on the last business day of each month (the “Adjustment Day”). The components that will be added to or deleted from the Underlying Index on the Adjustment Day are determined three days

prior to the Adjustment Day (the “Selection Day”). Newly-issued bonds that meet the requirements are generally added; whereas, any Underlying Index components that no longer meet the above requirements on the Selection Day are removed from the Underlying Index on the Adjustment Day.

The composition of the Underlying Index is ordinarily adjusted monthly on the Adjustment Day. On each Adjustment Day each issuer is weighted proportionally according to its market capitalization. The percentage weight of any issuer is capped at 3% on each Selection Day. The excess weight is allocated proportionally to all index components whose percentage weights are not capped. The Underlying Index is reconstituted and rebalanced on a monthly basis. During extraordinary market conditions, the Index Provider may delay any scheduled reconstitution and rebalancing of the Underlying Index. During any such delay it is possible that the Underlying Index will deviate from the Underlying Index’s stated methodology.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund’s performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund’s net asset value (“NAV”), trading price, yield, total return and ability to meet its investment objective.

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer’s inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government

activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and the pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this “MAIN RISKS” section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Exposure to high yield (lower rated) debt instruments (also known as “junk bonds”) may involve greater levels of credit, prepayment, liquidity and valuation risk than for higher rated instruments. High yield debt instruments may be more sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments are considered speculative with respect to the issuer’s continuing ability to make principal and interest payments and, therefore, such instruments generally involve greater risk of default or price changes than higher rated debt instruments. High-yield debt securities’ total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities as there may be no established secondary market. Even if an established secondary market exists, less active markets may diminish the fund’s ability to obtain accurate market quotations when valuing the portfolio securities and thereby give rise to valuation risk.

Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities can experience sudden and sharp volatility, which is generally associated more with investments in stocks. High yield debt instruments may be more

sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments may also present risks based on payment expectations. For example, these instruments may contain redemption or call provisions. If an issuer exercises these provisions in a declining interest rate market, the fund would have to replace the security with a lower yielding security, resulting in a decreased return for investors. If the issuer of a security is in default with respect to interest or principal payments, the issuer’s security could lose its entire value. Furthermore, the transaction costs associated with the purchase and sale of high yield debt instruments may vary greatly depending upon a number of factors and may adversely affect the fund’s performance.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund’s investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty’s legal obligations in certain jurisdictions outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management’s estimate of its value. For the same reason, it may at times be difficult to value the fund’s foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund’s portfolio may change on days when shareholders will not be able to purchase or sell the fund’s shares.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund’s performance.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, is expected to be phased out by the end of 2021, although the US Dollar LIBOR phase out may extend past 2021 for certain existing contracts. The fund or the instruments in which the fund invests may be adversely affected by the phase out by, among other things, increased volatility or illiquidity. There remains uncertainty regarding the future use of LIBOR

and the nature of any replacement reference rate and, accordingly, it is difficult to predict the impact to the fund of the transition away from LIBOR.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health, the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Restricted securities/Rule 144A securities risk. The fund may invest its assets in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Liquidity risk may result from the lack of an active market and the reduced number and capacity of traditional market participants to make a market in fixed income securities. Liquidity risk also may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income mutual funds or ETFs may be higher than normal, causing increased supply in the market due to selling activity. It may also be the case that other market participants may be attempting to liquidate fixed-income holdings at the same time as the fund, causing increased supply in the market and contributing to liquidity risk and downward pricing pressure.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment's sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Secondary markets may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may prevent the fund from being able to realize full value and thus sell a security for its full valuation. This could cause a material decline in the fund's net asset value.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying

Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index's rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the index provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying

Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code of 1986, as amended, may also impact the fund's ability to replicate the performance of the Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not included in the Underlying Index, the fund's return may not correlate as well with the returns of the Underlying Index as would be the case if the fund purchased all the securities in the Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

For purposes of calculating the fund's net asset value, the value of assets denominated in non-US currencies is converted into US dollars using prevailing market rates on the date of valuation as quoted by one or more data service providers. This conversion may result in a difference between the prices used to calculate the fund's net asset value and the prices used by the Underlying Index, which, in turn, could result in a difference between the fund's performance and the performance of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV.

Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

In addition, the securities held by the fund may be traded in markets that close at a different time than an exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when an exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. More generally, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched

or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions,

operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of the fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into “over-the-counter” (i.e., not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund’s counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund’s contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund’s rights as a creditor (e.g., the fund may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund’s derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund’s initial investment in such contracts.

INVESTMENT OBJECTIVE

Xtrackers High Beta High Yield Bond ETF (the “fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market High Beta Index (the “Underlying Index”).

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is comprised of US dollar-denominated high yield corporate bonds that potentially have higher beta to the overall high yield corporate bond market.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as a whole. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

The Underlying Index is designed to track the performance of the segment of the US dollar-denominated high yield corporate bond market that exhibits higher overall beta to the broader high yield corporate fixed income market. Beta is a measure of a security’s price sensitivity (i.e., volatility); it reflects the rate of change in a security’s price that results from overall market movements. This is accomplished through reviewing the yields of all securities in the eligible universe on a sector basis. Higher yielding bonds tend to exhibit higher beta. If an individual security’s yield is higher than that of its sector’s median yield, it will be eligible for inclusion in the Underlying Index. Currently, the bonds included in the Underlying Index include US dollar-denominated high yield corporate bonds that: (i) have a composite rating calculated from available ratings among at least one of these three rating agencies: Moody’s[®] Investors Services (“Moody’s”), Standard & Poor’s[®] Financial Services, LLC (“S&P”) and Fitch, Inc. (“Fitch”) as sub-investment grade; (ii) are from issuers with at least \$1 billion outstanding face value; (iii) have at least \$400 million of outstanding face value; (iv) have an original maturity date at most 15 years; and (v) have at least one year to maturity (or at least 20 months to maturity for bonds newly added to the Underlying Index). In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the “1933 Act”). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance

with the Underlying Index, and, therefore, any changes to the Underlying Index's reconstitution and rebalance schedule will result in corresponding changes to the fund's reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG ("Solactive" or "Index Provider"), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 644 bonds issued by 241 different issuers from the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (85.1%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes in high yield bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the communication services (19.6%) and consumer discretionary (16.3%) sectors. The communication services sector includes companies that facilitate communication and offer related content and information through various mediums. It includes telecom and media and entertainment companies including producers of interactive gaming products and companies engaged in content and information creation or distribution through proprietary platforms. The consumer discretionary sector includes durable goods, apparel, entertainment and leisure, and automobiles. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the Investment Company Act of 1940, as amended (the "1940 Act"), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other

types of options and swaps related to its Underlying Index. The fund will not use futures or options for speculative purposes.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

Solactive USD High Yield Corporates Total Market High Beta Index

Number of Components: approximately (644)

Index Description. The Solactive USD High Yield Corporates Total Market High Beta Index is designed to track the performance of US dollar-denominated high yield corporate fixed income securities that exhibit high overall beta to the broader high yield corporate fixed income market. Beta is a measure of a security's price sensitivity (i.e., volatility); it reflects the rate of change in a security's price that results from overall market movements. This is accomplished through reviewing the yields of all securities in the eligible universe on a sector basis. If an individual security's yield is higher than that of its sector's median, it will be eligible for inclusion in the Solactive USD High Yield Corporates Total Market High Beta Index.

The universe of bonds eligible for inclusion in the Underlying Index are those bonds that fulfill the following conditions:

- Corporate debt (excluding government debt, quasigovernment debt, debt guaranteed or backed by governments, Regulation S securities, municipal bonds, Brady bonds and restructured bonds, private placements except 144A series);
- Bonds that are classified as fixed coupon bonds, step-up bonds driven by rating or where the coupon schedule is known at issuance, medium term notes ("MTNs"), callable and puttable bonds and 144A securities (excluding zero coupon bonds, floating/variable coupon bonds, convertibles, inflation-linked bonds, perpetual bonds, accrued only bonds, Eurobonds, sinker, step-up bonds not driven by rating or step-up bonds where the coupon schedule is not known at issuance, pay-in-kind bonds);
- Covered bonds and notes may not be included in the Underlying Index;

- Country of risk of the bond can be defined as developed markets (classified by the Index Provider) to include the following countries as of October 31, 2021: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States;
- Time to maturity must be at least one year (or at least 20 months to maturity for bonds newly added to the Underlying Index);
- Time to maturity at issuance must be 15 years or less;
- Bonds must be US dollar denominated;
- Amount outstanding of each bond must be at least \$400 million;
- Issuer must have at least \$1 billion in total principal amount outstanding; and
- Must be rated by at least one of Fitch, Moody's or S&P. The average rating calculated from available ratings should be sub-investment grade.

All new securities must have a 30-day moving average yield to worst (the lowest potential yield that can be received on a bond without actual issuer default) which is higher than the 30-day moving average median yield of the respective securities' sector. A security is removed from the index when the 30-day moving average yield to worst falls below 95% of the 30-day moving average of the median yield to worst of said securities sector.

Bonds for which a full call or a full tender offer is announced with the effective date in the upcoming month will be excluded from the index composition on the selection day. For the avoidance of doubt, bonds which will not be fully redeemed (due to a call/tender) during the next month and meet all other index criteria are eligible to join the index on the next selection day.

The Underlying Index is rebalanced on the last business day of each month (the "Adjustment Day"). The components that will be added to or deleted from the Underlying Index on the Adjustment Day are determined three days prior to the Adjustment Day (the "Selection Day"). Newly-issued bonds that meet the requirements are generally added; whereas, any Underlying Index components that no longer meet the above requirements on the Selection Day are removed from the Underlying Index on the Adjustment Day.

The composition of the Underlying Index is ordinarily adjusted monthly on the Adjustment Day. On each Adjustment Day each issuer is weighted proportionally according to its market capitalization. The percentage weight of any issuer is capped at 3% on each Selection Day. The excess weight is allocated proportionally to all index components whose percentage weights are not capped. The Underlying Index is reconstituted and rebalanced on a monthly basis. During extraordinary market conditions, the Index Provider may delay any scheduled reconstitution and rebalancing of

the Underlying Index. During any such delay it is possible that the Underlying Index will deviate from the Underlying Index's stated methodology.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund's performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund's net asset value ("NAV"), trading price, yield, total return and ability to meet its investment objective.

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and the pandemic may result in

the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this “MAIN RISKS” section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Exposure to high yield (lower rated) debt instruments (also known as “junk bonds”) may involve greater levels of credit, prepayment, liquidity and valuation risk than for higher rated instruments. High yield debt instruments may be more sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments are considered speculative with respect to the issuer’s continuing ability to make principal and interest payments and, therefore, such instruments generally involve greater risk of default or price changes than higher rated debt instruments. High-yield debt securities’ total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities as there may be no established secondary market. Even if an established secondary market exists, less active markets may diminish the fund’s ability to obtain accurate market quotations when valuing the portfolio securities and thereby give rise to valuation risk.

Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities can experience sudden and sharp volatility, which is generally associated more with investments in stocks. High yield debt instruments may be more sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments may also present risks based on payment expectations. For example, these instruments may contain redemption or call provisions. If an issuer exercises these provisions in a declining interest rate market, the fund would have to replace the security with a lower yielding security, resulting in a decreased return for investors. If the issuer of a security is in default with respect to interest or principal payments, the issuer’s security could lose its entire value. Furthermore, the transaction costs associated with the purchase and sale of high yield debt instruments may vary greatly depending upon a number of factors and may adversely affect the fund’s performance.

High beta risk. High beta investing entails investing in securities that are more sensitive to changes in the market, and thus more volatile based on historical market index data. The fund may be more volatile since it will track the Underlying Index, which is designed to provide exposure to securities that have a higher beta and thus more volatility. Volatile securities may be subject to sharp swings in value, and may change unpredictably, affecting the value of such securities and, consequently, the value of the Shares. Although the Underlying Index was created to seek higher volatility than the broader high yield corporate fixed income market, there is no guarantee that the Underlying Index’s methodology will be successful in doing so.

Distressed securities risk. Distressed securities are speculative and involve substantial risks in addition to the risks of investing in junk bonds. The fund will generally not receive interest payments on the distressed securities and may incur costs to protect its investment. In addition, distressed securities involve the substantial risk that principal will not be repaid. These securities may present a substantial risk of default or may be in default at the time of investment. The fund may incur additional expenses to the extent it is required to seek recovery upon a default in the payment of principal or interest on its portfolio holdings. In any reorganization or liquidation proceeding relating to a portfolio company, the fund may lose its entire investment or may be required to accept cash or securities with a value less than its original investment. Distressed securities and any securities received in an exchange for such securities may be subject to restrictions on resale.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund’s investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty’s legal obligations in certain jurisdictions outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and

costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health, the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Communication services sector risk. To the extent that the fund invests significantly in the communication services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the communication services sector. Companies in the communications services sector can be adversely affected by, among other things, changes in government regulation, intense competition, dependency on patent protection, equipment incompatibility, changing consumer preferences, technological obsolescence, and large capital expenditures and debt burdens.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Restricted securities/Rule 144A securities risk. The fund may invest its assets in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value

may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Liquidity risk may result from the lack of an active market and the reduced number and capacity of traditional market participants to make a market in fixed income securities. Liquidity risk also may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income mutual funds or ETFs may be higher than normal, causing increased supply in the market due to selling activity. It may also be the case that other market participants may be attempting to liquidate fixed-income holdings at the same time as the fund, causing increased supply in the market and contributing to liquidity risk and downward pricing pressure.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment's sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Secondary markets may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may prevent the fund from being able to realize full value and thus sell a security for its full valuation. This could cause a material decline in the fund's net asset value.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index's rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against such errors. Therefore, the gains, losses or costs associated with the index provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a

number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code of 1986, as amended, may also impact the fund's ability to replicate the performance of the Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not included in the Underlying Index, the fund's return may not correlate as well with the returns of the Underlying Index as would be the case if the fund purchased all the securities in the Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

For purposes of calculating the fund's net asset value, the value of assets denominated in non-US currencies is converted into US dollars using prevailing market rates on the date of valuation as quoted by one or more data service providers. This conversion may result in a difference between the prices used to calculate the fund's net asset value and the prices used by the Underlying Index, which, in turn, could result in a difference between the fund's performance and the performance of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can

purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

In addition, the securities held by the fund may be traded in markets that close at a different time than an exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when an exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. More generally, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent

limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of the fund's NAV and/or the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into "over-the-counter" (i.e., not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund's rights as a creditor (e.g., the fund

may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund's derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

Cyber-attacks may include unauthorized attempts by third parties to improperly access, modify, disrupt the operations of, or prevent access to the systems of the fund's service providers or counterparties, issuers of securities held by the fund or other market participants or data within them. In addition, power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data.

Cyber-attacks, disruptions, or failures may adversely affect the fund and its shareholders or cause reputational damage and subject the fund to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. In addition, cyber-attacks, disruptions, or failures involving a fund counterparty could affect such counterparty's ability to meet its obligations to the fund, which may result in losses to the fund and its shareholders. Similar types of operational and technology risks are also present for issuers of securities held by the fund, which could have material adverse consequences for such issuers, and may cause the fund's investments to lose value. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

For example, the fund relies on various sources to calculate its NAV. Therefore, the fund is subject to certain operational risks associated with reliance on third party service providers and data sources. NAV calculation may be impacted by operational risks arising from factors such as failures in systems and technology. Such failures may result in delays in the calculation of the fund's NAV and/or

the inability to calculate NAV over extended time periods. The fund may be unable to recover any losses associated with such failures.

Authorized Participant concentration risk. The fund may have a limited number of financial institutions that may act as APs. Only APs who have entered into agreements with the fund's distributor may engage in creation or redemption transactions directly with the fund (as described in the section of this Prospectus entitled "Buying and Selling Shares"). If those APs exit the business or are unable to process creation and/or redemption orders, (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market).

Counterparty risk. A financial institution or other counterparty with whom the fund does business, or that underwrites, distributes or guarantees any investments or contracts that the fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the fund or could delay the return or delivery of collateral or other assets to the fund.

Securities lending risk. Securities lending involves the risk that the fund may lose money because the borrower of the loaned securities fails to return the securities in a timely manner or at all. The fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities, or a decline in the value of any investments made with cash collateral or even a loss of rights in the collateral should the borrower of the securities fail financially while holding the securities.

Derivatives risk. Derivatives are financial instruments, such as futures and swaps, whose values are based on the value of one or more indicators, such as a security, asset, currency, interest rate, or index. Derivatives involve risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments. For example, derivatives involve the risk of mispricing or improper valuation and the risk that changes in the value of a derivative may not correlate perfectly with the underlying indicator. Derivative transactions can create investment leverage, may be highly volatile and the fund could lose more than the amount it invests. Many derivative transactions are entered into "over-the-counter" (i.e., not on an exchange or contract market); as a result, the value of such a derivative transaction will depend on the ability and the willingness of the fund's counterparty to perform its obligations under the transaction. If a counterparty were to default on its obligations, the fund's contractual remedies against such counterparty may be subject to bankruptcy and insolvency laws, which could affect the fund's rights as a creditor (e.g., the fund

may not receive the net amount of payments that it is contractually entitled to receive). A liquid secondary market may not always exist for the fund's derivative positions at any time.

Futures risk. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying instrument. Depending on the terms of the particular contract, futures contracts are settled through either physical delivery of the underlying instrument on the settlement date or by payment of a cash settlement amount on the settlement date. A decision as to whether, when and how to use futures involves the exercise of skill and judgment and even a well-conceived futures transaction may be unsuccessful because of market behavior or unexpected events. In addition to the derivatives risks discussed above, the prices of futures can be highly volatile, using futures can lower total return and the potential loss from futures can exceed the fund's initial investment in such contracts.

Xtrackers Low Beta High Yield Bond ETF

INVESTMENT OBJECTIVE

Xtrackers Low Beta High Yield Bond ETF (the "fund") seeks investment results that correspond generally to the performance, before fees and expenses, of the Solactive USD High Yield Corporates Total Market Low Beta Index (the "Underlying Index").

PRINCIPAL INVESTMENT STRATEGIES

The fund, using a "passive" or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is comprised of US dollar-denominated high yield corporate bonds that potentially have lower beta to the overall high yield corporate bond market.

The fund uses a representative sampling indexing strategy in seeking to track the Underlying Index, meaning it generally will invest in a sample of securities in the index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Underlying Index as a whole. The fund will invest at least 80% of its total assets (but typically far more) in component securities of the Underlying Index.

The Underlying Index is designed to track the performance of the segment of the US dollar-denominated high yield corporate bond market that exhibits lower overall beta to the broader high yield corporate fixed income market. Beta is a measure of a security's price sensitivity (i.e., volatility); it reflects the rate of change in a security's price that results from overall market movements. This is accomplished through reviewing the yields of all securities in the eligible universe on a sector basis. Lower yielding bonds tend to exhibit lower beta. If an individual security's yield is

lower than that of its sector's median yield, it will be eligible for inclusion in the Underlying Index. Currently, the bonds included in the Underlying Index include US dollar-denominated high yield corporate bonds that: (i) have a composite rating calculated from available ratings among at least one of these three rating agencies: Moody's[®] Investors Services ("Moody's"), Standard & Poor's[®] Financial Services, LLC ("S&P") and Fitch, Inc. ("Fitch") as sub-investment grade; (ii) are from issuers with at least \$1 billion outstanding face value; (iii) have at least \$400 million of outstanding face value; (iv) have an original maturity date at most 15 years; and (v) have at least one year to maturity (or at least 20 months to maturity for bonds newly added to the Underlying Index). In addition, the Underlying Index may include a substantial number of bonds offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"). Under normal circumstances, the Underlying Index is reconstituted and rebalanced on a monthly basis. The fund reconstitutes and rebalances its portfolio in accordance with the Underlying Index, and, therefore, any changes to the Underlying Index's reconstitution and rebalance schedule will result in corresponding changes to the fund's reconstitution and rebalance schedule. The Underlying Index is market capitalization weighted and the percentage weight of any issuer is capped at 3%. The Underlying Index is sponsored by Solactive AG ("Solactive" or "Index Provider"), which is not affiliated with or sponsored by the fund or the Advisor.

As of October 31, 2021, the Underlying Index was comprised of 617 bonds issued by 241 different issuers from the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States.

As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers from the United States (91.6%).

The fund will normally invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes in high yield bonds.

The fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that its Underlying Index is concentrated. As of October 31, 2021, a significant percentage of the Underlying Index was comprised of issuers in the consumer discretionary (16.1%) and communication services (15.3%) sectors. The consumer discretionary sector includes durable goods, apparel, entertainment and leisure, and automobiles. The communication services sector includes companies that facilitate communication and offer related content and information through various mediums. It includes telecom and media and entertainment companies including producers

of interactive gaming products and companies engaged in content and information creation or distribution through proprietary platforms. To the extent that the fund tracks the Underlying Index, the fund's investment in certain sectors or countries may change over time.

The fund may invest its remaining assets in other securities, including securities not in the Underlying Index, cash and cash equivalents, money market instruments, such as repurchase agreements or money market funds (including money market funds advised by the Advisor or its affiliates (subject to applicable limitations under the Investment Company Act of 1940, as amended (the "1940 Act"), or exemptions therefrom), convertible securities, structured notes (notes on which the amount of principal repayment and interest payments are based on the movement of one or more specified factors, such as the movement of a particular stock or stock index) and in futures contracts, options on futures contracts and other types of options and swaps related to its Underlying Index. The fund will not use futures or options for speculative purposes.

The fund expects to use futures contracts to a limited extent in seeking performance that corresponds to its Underlying Index.

The fund is not sponsored, endorsed, sold or promoted by Solactive.

Securities lending. The fund may lend its portfolio securities to brokers, dealers and other financial institutions desiring to borrow securities to complete transactions and for other purposes. In connection with such loans, the fund receives liquid collateral equal to at least 102% of the value of the portfolio securities being lent. This collateral is marked to market on a daily basis. The fund may lend its portfolio securities in an amount up to 33 1/3% of its total assets.

Underlying Index Information

Solactive USD High Yield Corporates Total Market Low Beta Index

Number of Components: approximately (617)

Index Description. The Solactive USD High Yield Corporates Total Market Low Beta Index is designed to track the performance of US dollar denominated high yield corporate fixed income securities that exhibit low overall beta to the broader high yield corporate fixed income market. Beta is a measure of a security's price sensitivity (i.e., volatility); it reflects the rate of change in a security's price that results from overall market movements. This is accomplished through reviewing the yields of all securities in the eligible universe on a sector basis. If an individual security's yield is lower than that of its sector's median, it will be eligible for inclusion in the Solactive USD High Yield Corporates Total Market Low Beta Index.

The universe of bonds eligible for inclusion in the Underlying Index are those bonds that fulfill the following conditions:

- Corporate debt (excluding government debt, quasigovernment debt, debt guaranteed or backed by governments, Regulation S securities, municipal bonds, Brady bonds and restructured bonds, private placements except 144A series);
- Bonds that are classified as fixed coupon bonds, step-up bonds driven by rating or where the coupon schedule is known at issuance, medium term notes (“MTNs”), callable and putable bonds and 144A securities (excluding zero coupon bonds, floating/variable coupon bonds, convertibles, inflation-linked bonds, perpetual bonds, accrued only bonds, Eurobonds, sinker, step-up bonds not driven by rating or step-up bonds where the coupon schedule is not known at issuance, pay-in-kind bonds);
- Covered bonds and notes may not be included in the Underlying Index;
- Country of risk of the bond can be defined as developed markets (classified by the Index Provider) to include the following countries as of October 31, 2021: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States;
- Time to maturity must be at least one year (or at least 20 months to maturity for bonds newly added to the Underlying Index);
- Time to maturity at issuance must be 15 years or less;
- Bonds must be US dollar denominated;
- Amount outstanding of each bond must be at least \$400 million;
- Issuer must have at least \$1 billion in total principal amount outstanding; and
- Must be rated by at least one of Fitch, Moody’s or S&P. The average rating calculated from available ratings should be sub-investment grade.

All new securities must have a 30-day moving average yield to worst (the lowest potential yield that can be received on a bond without actual issuer default) which is lower than the 30-day moving average median yield of the respective securities’ sector. A security is removed from the index when the 30-day moving average yield to worst rises above 105% of the 30-day moving average of the median yield to worst of said securities sector.

Bonds for which a full call or a full tender offer is announced with the effective date in the upcoming month will be excluded from the index composition on the selection day. For the avoidance of doubt, bonds which will not be fully redeemed (due to a call/tender) during the next month and meet all other index criteria are eligible to join the index on the next selection day.

The Underlying Index is rebalanced on the last business day of each month (the “Adjustment Day”). The components that will be added to or deleted from the Underlying Index on the Adjustment Day are determined three days prior to the Adjustment Day (the “Selection Day”). Newly-issued bonds that meet the requirements are generally added; whereas, any Underlying Index components that no longer meet the above requirements on the Selection Day are removed from the Underlying Index on the Adjustment Day.

The composition of the Underlying Index is ordinarily adjusted monthly on the Adjustment Day. On each Adjustment Day each issuer is weighted proportionally according to its market capitalization. The percentage weight of any issuer is capped at 3% on each Selection Day. The excess weight is allocated proportionally to all index components whose percentage weights are not capped. The Underlying Index is reconstituted and rebalanced on a monthly basis. During extraordinary market conditions, the Index Provider may delay any scheduled reconstitution and rebalancing of the Underlying Index. During any such delay it is possible that the Underlying Index will deviate from the Underlying Index’s stated methodology.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the fund, and the fund’s performance could trail that of other investments. The fund is subject to the main risks noted below, any of which may adversely affect the fund’s net asset value (“NAV”), trading price, yield, total return and ability to meet its investment objective.

Fixed income securities risk. Fixed-income securities are subject to the risk of the issuer’s inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility resulting from, among other things, interest rate sensitivity, market perception of the creditworthiness of the issuer, willingness of broker-dealers and other market participants to make markets in the applicable securities, and general market liquidity (i.e., market risk). Lower rated fixed-income securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled.

Market disruption risk. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the fund and its investments. Market disruptions could cause the fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Recent market disruption events include the pandemic spread of the novel coronavirus known as COVID-19, and the significant uncertainty, market volatility, decreased economic and other activity, increased government activity, including economic stimulus measures, and supply chain disruptions that it has caused. The full effects, duration and costs of the COVID-19 pandemic are impossible to predict, and the circumstances surrounding the COVID-19 pandemic will continue to evolve, including the risk of future increased rates of infection due to low vaccination rates and/or the lack of effectiveness of current vaccines against new variants. The pandemic has affected and may continue to affect certain countries, industries, economic sectors, companies and investment products more than others, may exacerbate existing economic, political, or social tensions and may increase the probability of an economic recession or depression. The fund and its investments may be adversely affected by the effects of the COVID-19 pandemic, and the pandemic may result in the fund and its service providers experiencing operational difficulties in coordinating a remote workforce and implementing their business continuity plans, among others.

The disruptions caused by the COVID-19 pandemic may magnify the impact of each of the other risks described in this “MAIN RISKS” section and may increase volatility in one or more markets in which the fund invests leading to the potential for greater losses for the fund.

High yield securities risk. Exposure to high yield (lower rated) debt instruments (also known as “junk bonds”) may involve greater levels of credit, prepayment, liquidity and valuation risk than for higher rated instruments. High yield debt instruments may be more sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments are considered speculative with respect to the issuer’s continuing ability to make principal and interest payments and, therefore, such instruments generally involve greater risk of default or price changes than higher rated debt instruments. High-yield debt securities’ total return and yield may generally be expected to fluctuate more than the total return and yield of investment-grade debt securities. A real or perceived economic downturn or an increase in market interest rates could cause a decline in the value of high-yield debt securities, result in increased redemptions and/or result in increased portfolio turnover, which could result in a decline in the NAV of the fund, reduce liquidity for certain investments and/or increase costs. High-yield debt securities are often thinly traded and can be more difficult to sell and value accurately than investment-grade debt securities as there may be no established secondary market. Even if an established secondary market exists, less active markets may diminish the fund’s ability to obtain accurate market quotations when valuing the portfolio securities and thereby give rise to valuation risk.

Investments in high-yield debt securities could increase liquidity risk for the fund. In addition, the market for high-yield debt securities can experience sudden and sharp volatility, which is generally associated more with investments in stocks. High yield debt instruments may be more sensitive to economic changes, political changes, or adverse developments specific to a company than other fixed income instruments. High yield debt instruments may also present risks based on payment expectations. For example, these instruments may contain redemption or call provisions. If an issuer exercises these provisions in a declining interest rate market, the fund would have to replace the security with a lower yielding security, resulting in a decreased return for investors. If the issuer of a security is in default with respect to interest or principal payments, the issuer’s security could lose its entire value. Furthermore, the transaction costs associated with the purchase and sale of high yield debt instruments may vary greatly depending upon a number of factors and may adversely affect the fund’s performance.

Low beta risk. Low beta investing entails investing in securities that are less sensitive to changes in the market, and thus are less volatile based on historical market index data. Although the Underlying Index was created to seek lower volatility than the broader high yield corporate fixed income market, there is no guarantee that the Underlying Index’s methodology will be successful in doing so. The Underlying Index may be unsuccessful in creating an index that minimizes volatility, and there is a risk that the fund may experience more than minimum volatility. Securities in the fund’s portfolio may be subject to price volatility and the prices may not be any less volatile than the broader high yield corporate fixed income market, and could be more volatile.

Foreign investment risk. The fund faces the risks inherent in foreign investing. Adverse political, economic or social developments could undermine the value of the fund’s investments or prevent the fund from realizing the full value of its investments. Financial reporting standards for companies based in foreign markets differ from those in the US. Additionally, foreign securities markets generally are smaller and less liquid than US markets.

Foreign governments may restrict investment by foreigners, limit withdrawal of trading profit or currency from the country, restrict currency exchange or seize foreign investments. In addition, the fund may be limited in its ability to exercise its legal rights or enforce a counterparty’s legal obligations in certain jurisdictions outside of the US. The investments of the fund may also be subject to foreign withholding taxes. Foreign brokerage commissions and other fees are generally higher than those for US investments, and the transactions and custody of foreign assets may involve delays in payment, delivery or recovery of money or investments.

Foreign markets can have liquidity risks beyond those typical of US markets. Because foreign exchanges generally are smaller and less liquid than US exchanges, buying and selling foreign investments can be more difficult and costly. Relatively small transactions can sometimes materially affect the price and availability of securities. In certain situations, it may become virtually impossible to sell an investment at a price that approaches portfolio management's estimate of its value. For the same reason, it may at times be difficult to value the fund's foreign investments. In addition, because non-US markets may be open on days when the fund does not price its shares, the value of the securities in the fund's portfolio may change on days when shareholders will not be able to purchase or sell the fund's shares.

Interest rate risk. When interest rates rise, prices of debt securities generally decline. The longer the duration of the fund's debt securities, the more sensitive the fund will be to interest rate changes. (As a general rule, a 1% rise in interest rates means a 1% fall in value for every year of duration.) Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates. Rising interest rates may prompt redemptions from the fund. Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. The fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates. Certain countries have experienced negative interest rates on certain debt securities. Negative or very low interest rates could magnify the risks associated with changes in interest rates. In general, changing interest rates, including rates that fall below zero, could have unpredictable effects on markets and may expose debt and related markets to heightened volatility. During periods when interest rates are low or there are negative interest rates, the fund's yield (and total return) also may be low or the fund may be unable to maintain positive returns. In addition, in response to the COVID-19 pandemic, as with other serious economic disruptions, governmental authorities and regulators have enacted significant fiscal and monetary policy changes, including providing direct capital infusions into companies, creating new monetary programs and lowering interest rates considerably. These actions present heightened risks to debt instruments, and such risks could be even further heightened if these actions are modified or reversed or are ineffective in achieving their desired outcomes.

London Interbank Offered Rate (LIBOR), the benchmark rate for certain floating rate securities, is expected to be phased out by the end of 2021, although the US Dollar LIBOR phase out may extend past 2021 for certain existing contracts. The fund or the instruments in which the fund invests may be adversely affected by the phase out by, among other things, increased volatility or illiquidity. There

remains uncertainty regarding the future use of LIBOR and the nature of any replacement reference rate and, accordingly, it is difficult to predict the impact to the fund of the transition away from LIBOR.

Credit risk. The fund's performance could be hurt if an issuer of a debt security suffers an adverse change in financial condition that results in a payment default, security downgrade or inability to meet a financial obligation. Credit risk is greater for lower-rated securities. Because the issuers of junk bonds may be in uncertain financial health, the prices of their debt securities could be more vulnerable to bad economic news, or even the expectation of bad news, than investment-grade debt securities. Credit ratings may not be an accurate assessment of credit risk.

Focus risk. To the extent that the fund focuses its investments in particular industries, asset classes or sectors of the economy, any market price movements, regulatory or technological changes, or economic conditions affecting companies in those industries, asset classes or sectors may have a significant impact on the fund's performance.

Consumer discretionary sector risk. To the extent that the fund invests significantly in the consumer discretionary sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the consumer discretionary sector. Companies engaged in the consumer discretionary sector are subject to fluctuations in supply and demand. These companies may also be adversely affected by changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations.

Communication services sector risk. To the extent that the fund invests significantly in the communication services sector, the fund will be sensitive to changes in, and the fund's performance may depend to a greater extent on, the overall condition of the communication services sector. Companies in the communications services sector can be adversely affected by, among other things, changes in government regulation, intense competition, dependency on patent protection, equipment incompatibility, changing consumer preferences, technological obsolescence, and large capital expenditures and debt burdens.

Prepayment and extension risk. When interest rates fall, issuers of high interest debt obligations may pay off the debts earlier than expected (prepayment risk), and the fund may have to reinvest the proceeds at lower yields. When interest rates rise, issuers of lower interest debt obligations may pay off the debts later than expected (extension risk), thus keeping the fund's assets tied up in lower interest debt obligations. Ultimately, any unexpected behavior in interest rates could increase the volatility of

the fund's share price and yield and could hurt fund performance. Prepayments could also create capital gains tax liability in some instances.

Restricted securities/Rule 144A securities risk. The fund may invest its assets in securities offered pursuant to Rule 144A under the Securities Act of 1933, as amended (the "1933 Act"), which are restricted securities. They may be less liquid and more difficult to value than other investments because such securities may not be readily marketable in broad public markets. The fund may not be able to sell a restricted security promptly or at a reasonable price. Although there is a substantial institutional market for Rule 144A securities, it is not possible to predict exactly how the market for Rule 144A securities will develop. A restricted security that was liquid at the time of purchase may subsequently become illiquid and its value may decline as a result. Restricted securities that are deemed illiquid will count towards the fund's 15% limitation on illiquid securities. In addition, transaction costs may be higher for restricted securities than for more liquid securities. The fund may have to bear the expense of registering Rule 144A securities for resale and the risk of substantial delays in effecting the registration.

Liquidity risk. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. This risk can be ongoing for any security that does not trade actively or in large volumes, for any security that trades primarily on smaller markets, and for investments that typically trade only among a limited number of large investors (such as certain types of derivatives or restricted securities). In unusual market conditions, even normally liquid securities may be affected by a degree of liquidity risk. This may affect only certain securities or an overall securities market.

Although the fund primarily seeks to redeem shares of the fund on an in-kind basis, if the fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or other cash needs, the fund may suffer a loss. This may be magnified in a rising interest rate environment or other circumstances where redemptions from the fund may be higher than normal.

Liquidity risk may result from the lack of an active market and the reduced number and capacity of traditional market participants to make a market in fixed income securities. Liquidity risk also may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income mutual funds or ETFs may be higher than normal, causing increased supply in the market due to selling activity. It may also be the case that other market participants may be attempting to liquidate fixed-income holdings at the same time as the fund, causing increased supply in the market and contributing to liquidity risk and downward pricing pressure.

Pricing risk. If market conditions make it difficult to value some investments, the fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different from the value realized upon such investment's sale. As a result, you could pay more than the market value when buying fund shares or receive less than the market value when selling fund shares.

Secondary markets may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may prevent the fund from being able to realize full value and thus sell a security for its full valuation. This could cause a material decline in the fund's net asset value.

Issuer-specific risk. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Passive investing risk. Unlike a fund that is actively managed, in which portfolio management buys and sells securities based on research and analysis, the fund invests in securities included in, or representative of, the Underlying Index, regardless of their investment merits. Because the fund is designed to maintain a high level of exposure to the Underlying Index at all times, portfolio management generally will not buy or sell a security unless the security is added or removed, respectively, from the Underlying Index, and will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Index-related risk. The fund seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index as published by the index provider. There is no assurance that the Underlying Index provider will compile the Underlying Index accurately, or that the Underlying Index will be determined, composed or calculated accurately. Market disruptions could cause delays in the Underlying Index's rebalancing schedule. During any such delay, it is possible that the Underlying Index and, in turn, the fund will deviate from the Underlying Index's stated methodology and therefore experience returns different than those that would have been achieved under a normal rebalancing schedule. Generally, the index provider does not provide any warranty, or accept any liability, with respect to the quality, accuracy or completeness of the Underlying Index or its related data, and does not guarantee that the Underlying Index will be in line with its stated methodology. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its stated methodology may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the fund and its shareholders. The Advisor and its affiliates do not provide any warranty or guarantee against

such errors. Therefore, the gains, losses or costs associated with the index provider's errors will generally be borne by the fund and its shareholders.

Index-related risk may be higher for a fund that tracks an index comprised of, or an index that includes, foreign securities because regulatory and reporting requirements may differ from those in the US, resulting in a heightened risk of errors in the index data, index computation and/or index construction due to unreliable, out-dated or unavailable information.

Tracking error risk. The fund may be subject to tracking error, which is the divergence of the fund's performance from that of the Underlying Index. The performance of the fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows and operational inefficiencies. The fund's return also may diverge from the return of the Underlying Index because the fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. Transaction costs, including brokerage costs, will decrease the fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the fund's ability to adjust its exposure in order to track the Underlying Index. To the extent that portfolio management uses a representative sampling approach (investing in a representative selection of securities included in the Underlying Index rather than all securities in the Underlying Index), such approach may cause the fund's return to not be as well correlated with the return of the Underlying Index as would be the case if the fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. In addition, the fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions in which they are represented in the Underlying Index, due to government imposed legal restrictions or limitations, a lack of liquidity in the markets in which such securities trade, potential adverse tax consequences or other reasons. To the extent the fund calculates its net asset value based on fair value prices and the value of the Underlying Index is based on market prices (i.e., the value of the Underlying Index is not based on fair value prices), the fund's ability to track the Underlying Index may be adversely affected. Tracking error risk may be heightened during times of increased market volatility or other unusual market conditions. For tax efficiency purposes, the fund may sell certain securities, and such sale may cause the fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the fund's return may deviate significantly from the return of the Underlying Index.

The need to comply with the tax diversification and other requirements of the Internal Revenue Code of 1986, as amended, may also impact the fund's ability to replicate the performance of the Underlying Index. In addition, if the fund utilizes derivative instruments or holds other instruments that are not included in the Underlying Index, the fund's return may not correlate as well with the returns of the Underlying Index as would be the case if the fund purchased all the securities in the Underlying Index directly. Actions taken in response to proposed corporate actions could result in increased tracking error.

Tracking error risk may be higher for funds that track indices with significant weight in foreign issuers than funds that do not track such indices.

For purposes of calculating the fund's net asset value, the value of assets denominated in non-US currencies is converted into US dollars using prevailing market rates on the date of valuation as quoted by one or more data service providers. This conversion may result in a difference between the prices used to calculate the fund's net asset value and the prices used by the Underlying Index, which, in turn, could result in a difference between the fund's performance and the performance of the Underlying Index.

Market price risk. Fund shares are listed for trading on an exchange and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from the NAV during periods of market volatility. Differences between secondary market prices and the value of the fund's holdings may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the fund at a particular time. The Advisor cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Advisor believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price and the value of the fund's holdings vary significantly and you may pay more than the value of the fund's holdings when buying shares on the secondary market, and you may receive less than the value of the fund's holdings when you sell those shares. While the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in trading prices that differ significantly from the value of the fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of fund shares through arbitrage opportunities, there is no guarantee that

they will do so. If market makers exit the business or are unable to continue making markets in fund's shares, shares may trade at a discount to NAV like closed-end fund shares and may even face delisting (that is, investors would no longer be able to trade shares in the secondary market). The market price of shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that shares may trade at a discount to the fund's NAV, and the discount is likely to be greatest when the price of shares is falling fastest, which may be the time that you most want to sell your shares. There are various methods by which investors can purchase and sell shares of the funds and various orders that may be placed. Investors should consult their financial intermediary before purchasing or selling shares of the fund.

In addition, the securities held by the fund may be traded in markets that close at a different time than an exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when an exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. More generally, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which could cause a material decline in the fund's NAV. The bid-ask spread varies over time for shares of the fund based on the fund's trading volume and market liquidity, and is generally lower if the fund has substantial trading volume and market liquidity, and higher if the fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size). The fund's bid-ask spread may also be impacted by the liquidity of the underlying securities held by the fund, particularly for newly launched or smaller funds or in instances of significant volatility of the underlying securities. The fund's investment results are measured based upon the daily NAV of the fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the fund. In addition, transactions by large shareholders may account for a large percentage of the trading volume on an exchange and may, therefore, have a material effect on the market price of the fund's shares.

Operational and technology risk. Cyber-attacks, disruptions, or failures that affect the fund's service providers or counterparties, issuers of securities held by the fund, or other market participants may adversely affect the fund and its shareholders, including by causing losses for the fund or impairing fund operations. For example, the fund's or its service providers' assets or sensitive or confidential information may be misappropriated, data may be

corrupted and operations may be disrupted (e.g., cyber-attacks, operational failures or broader disruptions may cause the release of private shareholder information or confidential fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the fund's net asset value and impede trading). Market events and disruptions also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the fund's operations.

While the fund and its service providers may establish business continuity and other plans and processes that seek to address the possibility of and fallout from cyber-attacks, disruptions or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as fund counterparties, issuers of securities held by the fund or other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future and there is no assurance that such plans and processes will be effective. Among other situations, disruptions (for example, pandemics or health crises) that cause prolonged periods of remote work or significant employee absences at the fund's service providers could impact the ability to conduct the fund's operations. In addition, the fund cannot directly control any cybersecurity plans and systems put in place by its service providers, fund counterparties, issuers of securities held by the fund or other market participants.

OTHER POLICIES AND RISKS

While the previous pages describe the main points of each fund's strategy and risks, there are a few other matters to know about:

- Each of the policies described herein, including the investment objective and 80% investment policies of each fund, constitutes a non-fundamental policy that may be changed by the Board without shareholder approval. Each fund's 80% investment policies require 60 days' prior written notice to shareholders before they can be changed. Certain fundamental policies of each fund which can only be changed with shareholder approval are set forth in the SAI.
- Because each fund seeks to track its Underlying Index, no fund invests defensively and each fund will not invest in money market instruments or other short-term investments as part of a temporary defensive strategy to protect against potential market declines.
- Each fund may borrow money from a bank up to a limit of 10% of the value of its assets, but only for temporary or emergency purposes.

- Xtrackers USD High Yield Corporate Bond ETF may borrow money under a credit facility to the extent necessary for temporary or emergency purposes, including the funding of shareholder redemption requests, trade settlements, and as necessary to distribute to shareholders any income necessary to maintain a fund's status as a regulated investment company ("RIC").
- From time to time a third party, the Advisor and/or its affiliates may invest in a fund and hold its investment for a specific period of time in order for a fund to achieve size or scale. There can be no assurance that any such entity would not redeem its investment or that the size of a fund would be maintained at such levels. In order to comply with applicable law, it is possible that the Advisor or its affiliates, to the extent they are invested in a fund, may be required to redeem some or all of their ownership interests in a fund prematurely or at an inopportune time.
- Secondary market trading in fund shares may be halted by a stock exchange because of market conditions or other reasons. In addition, trading in fund shares on a stock exchange or in any market may be subject to trading halts caused by extraordinary market volatility pursuant to "circuit breaker" rules on the exchange or market. If a trading halt or unanticipated early closing of a stock exchange occurs, a shareholder may be unable to purchase or sell shares of each fund. There can be no assurance that the requirements necessary to maintain the listing or trading of fund shares will continue to be met or will remain unchanged or that shares will trade with any volume, or at all, in any secondary market. As with all other exchange traded securities, shares may be sold short and may experience increased volatility and price decreases associated with such trading activity.
- From time to time, a fund may have a concentration of shareholder accounts holding a significant percentage of shares outstanding. Investment activities of these shareholders could have a material impact on a fund. For example, a fund may be used as an underlying investment for other registered investment companies.

Portfolio Holdings Information

A description of DBX ETF Trust's ("Trust") policies and procedures with respect to the disclosure of each fund's portfolio securities is available in each fund's SAI. The top holdings of each fund can be found at Xtrackers.com. Fund fact sheets provide information regarding each fund's top holdings and may be requested by calling 1-855-329-3837 (1-855-DBX-ETFS).

WHO MANAGES AND OVERSEES THE FUNDS

The Investment Advisor

DBX Advisors LLC ("Advisor"), with headquarters at 875 Third Avenue, New York, NY 10022, is the investment advisor for the fund. Under the oversight of the Board,

the Advisor makes the investment decisions, buys and sells securities for the fund and conducts research that leads to these purchase and sale decisions.

The Advisor is an indirect, wholly-owned subsidiary of DWS Group GmbH & Co. KGaA ("DWS Group"), a separate, publicly-listed financial services firm that is an indirect, majority-owned subsidiary of Deutsche Bank AG. Founded in 2010, the Advisor managed approximately \$23 billion in 35 operational exchange-traded funds, as of November 30, 2021.

DWS represents the asset management activities conducted by DWS Group or any of its subsidiaries, including the Advisor and other affiliated investment advisors.

DWS is a global organization that offers a wide range of investing expertise and resources, including hundreds of portfolio managers and analysts and an office network that reaches the world's major investment centers. This well-resourced global investment platform brings together a wide variety of experience and investment insight across industries, regions, asset classes and investing styles.

The Advisor may utilize the resources of its global investment platform to provide investment management services through branch offices or affiliates located outside the US. In some cases, the Advisor may also utilize its branch offices or affiliates located in the US or outside the US to perform certain services, such as trade execution, trade matching and settlement, or various administrative, back-office or other services. To the extent services are performed outside the US, such activity may be subject to both US and foreign regulation. It is possible that the jurisdiction in which the Advisor or its affiliate performs such services may impose restrictions or limitations on portfolio transactions that are different from, and in addition to, those in the US.

Management Fee. Under the Investment Advisory Agreement, the Advisor is responsible for substantially all expenses of each fund, including the cost of transfer agency, custody, fund administration, compensation paid to the Independent Board Members, legal, audit and other services, except for the fee payments to the Advisor under the Investment Advisory Agreement (also known as a "unitary advisory fee"), interest expense, acquired fund fees and expenses, taxes, brokerage expenses, distribution fees or expenses (if any), litigation expenses and other extraordinary expenses.

For its services to each fund, during the most recent fiscal year, the Advisor received aggregate unitary advisory fees at the following annual rates as a percentage of each fund's average daily net assets.

Fund Name	Fee Paid
Xtrackers USD High Yield Corporate Bond ETF	0.15%*
Xtrackers Short Duration High Yield Bond ETF	0.20%
Xtrackers High Beta High Yield Bond ETF	0.20%*
Xtrackers Low Beta High Yield Bond ETF	0.20%*

* Reflecting the effect of expense limitations and/or fee waivers then in effect.

The following waivers are currently in effect:

For Xtrackers USD High Yield Corporate Bond ETF, the Advisor has contractually agreed through December 16, 2022 to waive a portion of its management fees to the extent necessary to prevent the operating expenses (except for interest expense, taxes, brokerage expenses, distribution fees or expenses, litigation expenses and other extraordinary expenses) of the fund from exceeding 0.15% of the fund's average daily net assets. This agreement may only be terminated by the fund's Board (and may not be terminated by the Advisor) prior to that time.

For Xtrackers High Beta High Yield Bond ETF, the Advisor has contractually agreed through December 16, 2022 to waive a portion of its management fees to the extent necessary to prevent the operating expenses (except for interest expense, taxes, brokerage expenses, distribution fees or expenses, litigation expenses and other extraordinary expenses) of the fund from exceeding 0.20% of the fund's average daily net assets. This agreement may only be terminated by the fund's Board (and may not be terminated by the Advisor) prior to that time.

For Xtrackers Low Beta High Yield Bond ETF, the Advisor has contractually agreed through December 16, 2022 to waive a portion of its management fees to the extent necessary to prevent the operating expenses (except for interest expense, taxes, brokerage expenses, distribution fees or expenses, litigation expenses and other extraordinary expenses) of the fund from exceeding 0.20% of the fund's average daily net assets. This agreement may only be terminated by the fund's Board (and may not be terminated by the Advisor) prior to that time.

A discussion regarding the basis for the Board's approval of each fund's Investment Advisory Agreement is contained in the most recent semi-annual report for the semi-annual period ended February 28. For information on how to obtain shareholder reports, see the back cover.

Multi-Manager Structure. The Advisor and the Trust may rely on an exemptive order (the "Order") from the SEC that permits the Advisor to enter into investment sub-advisory

agreements with unaffiliated and affiliated subadvisors without obtaining shareholder approval. The Advisor, subject to the review and approval of the Board, selects subadvisors for each fund and supervises, monitors and evaluates the performance of the subadvisor.

The Order also permits the Advisor, subject to the approval of the Board, to replace subadvisors and amend investment subadvisory agreements, including fees, without shareholder approval whenever the Advisor and the Board believe such action will benefit a fund and its shareholders. The Advisor thus has the ultimate responsibility (subject to the ultimate oversight of the Board) to recommend the hiring and replacement of subadvisors as well as the discretion to terminate any subadvisor and reallocate a fund's assets for management among any other subadvisor(s) and itself. This means that the Advisor is able to reduce the subadvisory fees and retain a larger portion of the management fee, or increase the subadvisory fees and retain a smaller portion of the management fee. Pursuant to the Order, the Advisor is not required to disclose its contractual fee arrangements with any subadvisor. The Advisor compensates a subadvisor out of its management fee.

MANAGEMENT

Xtrackers USD High Yield Corporate Bond ETF

The following Portfolio Managers are primarily responsible for the day-to-day management of the fund. Each Portfolio Manager functions as a member of a portfolio management team.

Bryan Richards, CFA, Vice President of DBX Advisors LLC and Head of Portfolio Engineering, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2016.

- Joined DWS in 2011 with 11 years of industry experience. Prior to joining DWS, he worked in ETF management at XShares Advisors, an ETF issuer based in New York, and before that he served as an equity analyst for Fairhaven Capital LLC, a long/short equity fund.
- Head of Passive Portfolio Management, Americas: New York.
- BS in Finance, Boston College.

Brandon Matsui, CFA, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2016.

- Joined DWS in 2016 with 12 years of industry experience. Prior to joining DWS, he was a relationship manager in the Portfolio Analytics Group at BlackRock Solutions. Previously, he managed overlay accounts at BNY Mellon Beta Management, and was a senior portfolio manager for fixed income ETFs and mutual funds at Charles Schwab Investment Management.
- Fixed Income Portfolio Manager, Passive Asset Management: New York.
- BS in History, University of California, Irvine; MBA in Finance, University of Hawaii; Financial Risk Certification holder.

Alexander Bridgeforth, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2016.

- Joined DWS in 2016, with 5 years of industry experience. Prior to joining DWS, he was responsible for management of fixed income mutual funds and ETFs at Charles Schwab Investment Management, where he previously supported portfolio managers and middle office duties.
- Fixed Income Portfolio Manager, Passive Asset Management: New York.
- BSBA in Finance, University of Arizona.

Xtrackers Short Duration High Yield Bond ETF

The following Portfolio Managers are primarily responsible for the day-to-day management of the fund. Each Portfolio Manager functions as a member of a portfolio management team.

Bryan Richards, CFA, Vice President of DBX Advisors LLC and Head of Portfolio Engineering, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2011 with 11 years of industry experience. Prior to joining DWS, he worked in ETF management at XShares Advisors, an ETF issuer based in New York, and before that he served as an equity analyst for Fairhaven Capital LLC, a long/short equity fund.
- Head of Passive Portfolio Management, Americas: New York.
- BS in Finance, Boston College.

Brandon Matsui, CFA, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2016 with 12 years of industry experience. Prior to joining DWS, he was a relationship manager in the Portfolio Analytics Group at BlackRock Solutions. Previously, he managed overlay accounts at BNY Mellon Beta Management, and was a senior portfolio manager for fixed income ETFs and mutual funds at Charles Schwab Investment Management.
- Fixed Income Portfolio Manager, Passive Asset Management: New York.
- BS in History, University of California, Irvine; MBA in Finance, University of Hawaii; Financial Risk Certification holder.

Alexander Bridgeforth, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2016, with 5 years of industry experience. Prior to joining DWS, he was responsible for management of fixed income mutual funds and ETFs at Charles Schwab Investment Management, where he previously supported portfolio managers and middle office duties.
- Fixed Income Portfolio Manager, Passive Asset Management: New York.
- BSBA in Finance, University of Arizona.

Xtrackers High Beta High Yield Bond ETF

The following Portfolio Managers are primarily responsible for the day-to-day management of the fund. Each Portfolio Manager functions as a member of a portfolio management team.

Bryan Richards, CFA, Vice President of DBX Advisors LLC and Head of Portfolio Engineering, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2011 with 11 years of industry experience. Prior to joining DWS, he worked in ETF management at XShares Advisors, an ETF issuer based in New York, and before that he served as an equity analyst for Fairhaven Capital LLC, a long/short equity fund.
- Head of Passive Portfolio Management, Americas: New York.
- BS in Finance, Boston College.

Brandon Matsui, CFA, Vice President of DBX Advisors LLC and Senior Portfolio Engineer, Systematic Investment Solutions, of DWS Investment Management Americas, Inc. Portfolio Manager of the fund. Began managing the fund in 2018.

- Joined DWS in 2016 with 12 years of industry experience. Prior to joining DWS, he was a relationship manager in the Portfolio Analytics Group at BlackRock Solutions. Previously, he managed overlay accounts at BNY Mellon Beta Management, and was a senior portfolio manager for fixed income ETFs and mutual funds at Charles Schwab Investment Management.
- Fixed Income Portfolio Manager, Passive Asset Management: New York.

Each fund's Statement of Additional Information provides additional information about a portfolio manager's investments in each fund, a description of the portfolio management compensation structure and information regarding other accounts managed.

Investing in the Funds

Additional shareholder information, including how to buy and sell shares of a fund, is available free of charge by calling toll-free: 1-855-329-3837 (1-855-DBX-ETFS) or visiting our website at Xtrackers.com.

BUYING AND SELLING SHARES

Shares of a fund are listed for trading on a national securities exchange during the trading day. Shares can be bought and sold throughout the trading day at market prices like shares of other publicly-traded companies. The Trust does not impose any minimum investment for shares of a fund purchased on an exchange. Buying or selling fund shares involves two types of costs that may apply to all securities transactions. When buying or selling shares of a fund through a broker, you will likely incur a brokerage commission or other charges determined by your broker. In addition, you may incur the cost of the “spread” – that is, any difference between the bid price and the ask price. The commission is frequently a fixed amount and may be a significant proportional cost for investors seeking to buy or sell small amounts of shares. The spread varies over time for shares of a fund based on its trading volume and market liquidity, and is generally lower if a fund has a lot of trading volume and market liquidity and higher if a fund has little trading volume and market liquidity.

Shares of a fund may be acquired or redeemed directly from a fund only in Creation Units or multiples thereof, as discussed in the section of this Prospectus entitled “Creations and Redemptions.” Only an AP may engage in creation or redemption transactions directly with a fund. Once created, shares of a fund generally trade in the secondary market in amounts less than a Creation Unit.

The Board has evaluated the risks of market timing activities by a fund’s shareholders. The Board noted that shares of a fund can only be purchased and redeemed directly from the fund in Creation Units by APs and that the vast majority of trading in a fund’s shares occurs on the secondary market. Because the secondary market trades do not involve a fund directly, it is unlikely those trades would cause many of the harmful effects of market timing, including dilution, disruption of portfolio management, increases in a fund’s trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with a fund, to the extent effected

in-kind (i.e., for securities), such trades do not cause any of the harmful effects (as previously noted) that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, the Board noted that such trades could result in dilution to a fund and increased transaction costs, which could negatively impact a fund’s ability to achieve its investment objective. However, the Board noted that direct trading by APs is critical to ensuring that a fund’s shares trade at or close to NAV. In addition, a fund imposes both fixed and variable transaction fees on purchases and redemptions of fund shares to cover the custodial and other costs incurred by a fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that a fund’s trading costs increase in those circumstances. Given this structure, the Board determined that with respect to a fund it is not necessary to adopt policies and procedures to detect and deter market timing of a fund’s shares.

Investments in a fund by other registered investment companies are subject to certain limitations imposed by the Investment Company Act of 1940, as amended (the “1940 Act”). Until January 19, 2022, such registered investment companies may invest in a fund beyond the applicable limitations imposed by the 1940 Act pursuant to the terms and conditions of an SEC exemptive order issued to the Trust, which includes a requirement that such registered investment companies enter into an agreement with the Trust. Effective January 19, 2022, the Trust’s SEC exemptive order will be rescinded by SEC action and an investment in a fund by a registered investment company beyond the applicable limitations imposed by the 1940 Act must comply with the requirements of a new rule enacted by the SEC.

Shares of a fund trade on the exchange and under the ticker symbol as shown in the table below.

Fund name	Ticker Symbol	Stock Exchange
Xtrackers USD High Yield Corporate Bond ETF	HYLB	NYSE Arca, Inc.
Xtrackers Short Duration High Yield Bond ETF	SHYL	NYSE Arca, Inc.
Xtrackers High Beta High Yield Bond ETF	HYUP	NYSE Arca, Inc.
Xtrackers Low Beta High Yield Bond ETF	HYDW	NYSE Arca, Inc.

Book Entry

Shares of a fund are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding shares of a fund and is recognized as the owner of all shares for all purposes.

Investors owning shares of a fund are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for shares of a fund. DTC participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or “street name” form.

Share Prices

The trading prices of a fund’s shares in the secondary market generally differ from a fund’s daily NAV per share and are affected by market forces such as supply and demand, economic conditions and other factors. Information regarding the intraday value of shares of a fund, also known as the “indicative optimized portfolio value” (“IOPV”), is disseminated every 15 seconds throughout the trading day by the national securities exchange on which a fund’s shares are listed or by market data vendors or other information providers. The IOPV is based on the current market value of the securities and/or cash required to be deposited in exchange for a Creation Unit. The IOPV does not necessarily reflect the precise composition of the current portfolio of securities held by a fund at a particular point in time nor the best possible valuation of the current portfolio. Therefore, the IOPV should not be viewed as a “real-time” update of the NAV, which is computed only once a day. The IOPV is generally determined by using both current market quotations and/or price quotations obtained

from broker-dealers that may trade in the portfolio securities held by a fund. The quotations of certain fund holdings may not be updated during US trading hours if such holdings do not trade in the US. Each fund is not involved in, or responsible for, the calculation or dissemination of the IOPV and makes no representation or warranty as to its accuracy.

Determination of Net Asset Value

The NAV of each fund is generally determined once daily Monday through Friday as of the regularly scheduled close of business of the New York Stock Exchange (“NYSE”) (normally 4:00 p.m., Eastern time) on each day that the NYSE is open for trading, provided that (a) any fund assets or liabilities denominated in currencies other than the US dollar are translated into US dollars at the prevailing market rates on the date of valuation as quoted by one or more data service providers (as detailed below) and (b) US fixed-income assets may be valued as of the announced closing time for trading in fixed-income instruments in a particular market or exchange. NAV is calculated by deducting all of the fund’s liabilities from the total value of its assets and dividing the result by the number of shares outstanding, rounding to the nearest cent. All valuations are subject to review by the Trust’s Board or its delegate.

In determining NAV, expenses are accrued and applied daily and securities and other assets for which market quotations are available are valued at market value. Equity investments are valued at market value, which is generally determined using the last reported official closing or last trading price on the exchange or market on which the security is primarily traded at the time of valuation. Debt securities’ values are based on price quotations or other equivalent indications of value provided by a third-party pricing service. Any such third-party pricing service may use a variety of methodologies to value some or all of a fund’s debt securities to determine the market price. For example, the prices of securities with characteristics similar to those held by a fund may be used to assist with the pricing process. In addition, the pricing service may use proprietary pricing models. In certain cases, some of a fund’s debt securities may be valued at the mean between the last available bid and ask prices for such securities or, if such prices are not available, at prices for securities of comparable maturity, quality, and type. Short-term securities for which market quotations are not readily available and money market securities maturing in 60 days or less are valued at amortized cost. The approximate value of shares of the applicable fund, an amount representing on a per share basis the sum of the current value of the deposit securities based on their then current market price and the estimated cash component will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. As the respective international local markets close, the market value of the deposit securities will continue to be updated for foreign exchange rates for the remainder of the US

trading day at the prescribed 15 second intervals. Generally, trading in non-US securities, US government securities, money market instruments and certain fixed-income securities is substantially completed each day at various times prior to the close of business on the NYSE. The values of such securities used in computing the NAV of each fund are determined as of such earlier times. The value of each Underlying Index will not be calculated and disseminated intra-day. The value and return of each Underlying Index is calculated once each trading day by the Index Provider based on prices received from the respective markets (including the respective international local markets).

If a security's market price is not readily available or does not otherwise accurately reflect the fair value of the security, the security will be valued by another method that the Advisor believes will better reflect fair value in accordance with the Trust's valuation policies and procedures approved by the Board. Each fund may use fair value pricing in a variety of circumstances, including but not limited to, situations when the value of a security in a fund's portfolio has been materially affected by events occurring after the close of the market on which the security is principally traded (such as a corporate action or other news that may materially affect the price of a security) or trading in a security has been suspended or halted. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate a fund's NAV and the prices used by the fund's Underlying Index. This may adversely affect a fund's ability to track its Underlying Index. With respect to securities that are primarily listed on foreign exchanges, the value of a fund's portfolio securities may change on days when you will not be able to purchase or sell your shares.

CREATIONS AND REDEMPTIONS

Prior to trading in the secondary market, shares of the funds are "created" at NAV by market makers, large investors and institutions only in block-size Creation Units of 50,000 shares or multiples thereof ("Creation Units"). The size of a Creation Unit will be subject to change. Each "creator" or AP (which must be a DTC participant) enters into an authorized participant agreement ("Authorized Participant Agreement") with the fund's distributor, ALPS Distributors, Inc. (the "Distributor"), subject to acceptance by the Transfer Agent. Only an AP may create or redeem Creation Units. Creation Units generally are issued and redeemed in exchange for a specific basket of securities approximating the holdings of a fund and a designated amount of cash. Each fund may pay out a portion of its redemption proceeds in cash rather than through the in-kind delivery of portfolio securities. Except when aggregated in Creation Units, shares are not redeemable by the fund. The prices at which creations and redemptions

occur are based on the next calculation of NAV after an order is received in a form described in the Authorized Participant Agreement.

Additional information about the procedures regarding creation and redemption of Creation Units (including the cut-off times for receipt of creation and redemption orders) is included in the SAI.

Each fund intends to comply with the US federal securities laws in accepting securities for deposits and satisfying redemptions with redemption securities, including that the securities accepted for deposits and the securities used to satisfy redemption requests will be sold in transactions that would be exempt from registration under the Securities Act of 1933, as amended ("1933 Act"). Further, an AP that is not a "qualified institutional buyer," as such term is defined under Rule 144A under the 1933 Act, will not be able to receive fund securities that are restricted securities eligible for resale under Rule 144A.

Authorized Participants and the Continuous Offering of Shares

Because new shares may be created and issued on an ongoing basis, at any point during the life of a fund a "distribution," as such term is used in the 1933 Act, may be occurring. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner that could render them statutory underwriters and subject to the prospectus delivery and liability provisions of the 1933 Act. Any determination of whether one is an underwriter must take into account all the relevant facts and circumstances of each particular case.

Broker-dealers should also note that dealers who are not "underwriters" but are participating in a distribution (as contrasted to ordinary secondary transactions), and thus dealing with shares that are part of an "unsold allotment" within the meaning of Section 4(3)(C) of the 1933 Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the 1933 Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the 1933 Act is available only with respect to transactions on a national securities exchange.

Certain affiliates of a fund and the Advisor may purchase and resell fund shares pursuant to this Prospectus.

Transaction Fees

APs are charged standard creation and redemption transaction fees to offset transfer and other transaction costs associated with the issuance and redemption of Creation Units. Purchasers and redeemers of Creation Units for cash are required to pay an additional variable charge (up to a maximum of 2% for redemptions, including the standard redemption fee) to compensate for brokerage and market impact expenses. The standard creation and

redemption transaction fee for each fund is set forth in the table below. The maximum redemption fee, as a percentage of the amount redeemed, is 2%.

Fund Name	Fee
Xtrackers USD High Yield Corporate Bond ETF	\$500
Xtrackers Short Duration High Yield Bond ETF	\$500
Xtrackers High Beta High Yield Bond ETF	\$500
Xtrackers Low Beta High Yield Bond ETF	\$500

DIVIDENDS AND DISTRIBUTIONS

General Policies. Dividends from net investment income, if any, are generally declared and paid monthly by each fund. Distributions of net realized capital gains, if any, generally are declared and paid once a year, but the Trust may make distributions on a more frequent basis for a fund. The Trust reserves the right to declare special distributions if, in its reasonable discretion, such action is necessary or advisable to preserve a fund's status as a regulated investment company ("RIC") or to avoid imposition of income or excise taxes on undistributed income or realized gains.

Dividends and other distributions on shares of a fund are distributed on a pro rata basis to beneficial owners of such shares. Dividend payments are made through DTC participants and indirect participants to beneficial owners as of the record date with proceeds received from a fund.

Dividend Reinvestment Service. No dividend reinvestment service is provided by the Trust. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of a fund for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of a fund purchased in the secondary market.

TAXES

As with any investment, you should consider how your investment in shares of a fund will be taxed. The US federal income tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in shares of a fund.

Unless your investment in fund shares is made through a tax-exempt entity or tax-advantaged retirement account, such as an IRA, you need to be aware of the possible tax consequences when a fund makes distributions or you sell fund shares.

US Federal Income Tax on Distributions

Distributions from a fund's net investment income (other than tax-exempt interest and qualified dividend income), including distributions of income from securities lending and distributions out of the fund's net short-term capital gains, if any, are taxable to you as ordinary income for US federal income tax purposes. Distributions by a fund of net long-term capital gains in excess of net short-term capital losses (capital gain dividends) are taxable for US federal income tax purposes to non-corporate shareholders as long-term capital gains, regardless of how long the shareholders have held the fund's shares. Distributions by the fund that qualify as qualified dividend income are taxable to non-corporate shareholders at long-term capital gain rates. The maximum individual US federal income rate applicable to "qualified dividend income" and long-term capital gains is generally either 15% or 20%, depending on whether the individual's income exceeds certain threshold amounts. As discussed below, an additional 3.8% Medicare tax may also apply to certain non-corporate shareholder's distributions from a fund.

Generally, qualified dividend income includes dividend income from taxable US corporations and qualified non-US corporations, provided that a fund satisfies certain holding period requirements in respect of the stock of such corporations and has not hedged its position in the stock in certain ways. For this purpose, a qualified non-US corporation means any non-US corporation that is eligible for benefits under a comprehensive income tax treaty with the United States which includes an exchange of information program or if the stock with respect to which the dividend was paid is readily tradable on an established United States security market. The term excludes a corporation that is a passive foreign investment company.

Given the investment strategies of the funds, it is not anticipated that a significant portion of the dividends paid by the funds will be eligible to be reported as qualified dividend income (with respect to an individual or other non-corporate shareholder) or for the corporate dividends received deduction (with respect to a corporate shareholder).

Investments in certain debt obligations or other securities may cause the fund to recognize income in excess of the cash generated by them. Thus, the fund could be required at times to liquidate other investments in order to satisfy its distribution requirements.

In general, your distributions are subject to US federal income tax for the year when they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year.

Distributions in excess of the fund's current and accumulated earnings and profits will, as to each shareholder, be treated for US federal income tax purposes as a tax-free return of capital to the extent of the shareholder's basis in his, her or its shares of the fund, and generally as a capital

gain thereafter. Because a return of capital distribution will reduce the shareholder's cost basis in his, her or its shares, a return of capital distribution may result in a higher capital gain or lower capital loss when those shares on which the distribution was received are sold.

If you are neither a resident nor a citizen of the United States or if you are a non-US entity, a fund's ordinary income dividends (which include distributions of net short-term capital gains) will generally be subject to a 30% US withholding tax, unless a lower treaty rate applies or unless such income is effectively connected with a US trade or business, provided that withholding tax will generally not apply to any gain or income realized by a non-US shareholder in respect of any distributions of long-term capital gains or upon the sale or other disposition of shares of a fund.

Dividends and interest received by a fund with respect to non-US securities may give rise to withholding and other taxes imposed by non-US countries. Tax conventions between certain countries and the United States may reduce or eliminate such taxes. If more than 50% of the total assets of a fund at the close of a year consist of non-US stocks or securities, the fund may "pass through" to you certain non-US income taxes (including withholding taxes) paid by the fund. This means that you would be considered to have received as additional gross income your share of such non-US taxes, but you may, in such case, be entitled to either a corresponding tax deduction or a credit in calculating your US federal income tax, subject in both cases to certain limitations.

If you are a resident or a citizen of the United States, by law, back-up withholding (currently at a rate of 24%) will apply to your distributions (including exempt-interest dividends) and proceeds if you have not provided a taxpayer identification number or social security number and made other required certifications or if you are otherwise subject to back-up withholding.

US Federal Income Tax when Shares are Sold

Currently, any capital gain or loss realized upon a sale of fund shares is generally treated as a long-term gain or loss if the shares have been held for more than one year. Any capital gain or loss realized upon a sale of fund shares held for one year or less is generally treated as short-term gain or loss, except that any capital loss on the sale of shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such shares. Your ability to deduct capital losses may be limited.

Medicare Tax

An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from a fund and net gains from redemptions or other taxable dispositions of fund shares) of US individuals, estates and trusts to the extent that such person's "modified adjusted gross

income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds certain threshold amounts.

The foregoing discussion summarizes some of the consequences under current US federal income tax law of an investment in a fund. It is not a substitute for personal tax advice. You may also be subject to state, local and foreign taxation on fund distributions and sales of shares. Consult your personal tax advisor about the potential tax consequences of an investment in shares of a fund under all applicable tax laws.

DISTRIBUTION

The Distributor distributes Creation Units for each fund on an agency basis. The Distributor does not maintain a secondary market in shares of a fund. The Distributor has no role in determining the policies of a fund or the securities that are purchased or sold by a fund. The Distributor's principal address is 1290 Broadway, Suite 1000, Denver, Colorado 80203.

The Advisor and/or its affiliates may pay additional compensation, out of their own assets and not as an additional charge to a fund, to selected affiliated and unaffiliated brokers, dealers, participating insurance companies or other financial intermediaries ("financial representatives") in connection with the sale and/or distribution of fund shares or the retention and/or servicing of fund investors and fund shares ("revenue sharing"). For example, the Advisor and/or its affiliates may compensate financial representatives for providing a fund with "shelf space" or access to a third party platform or fund offering list or other marketing programs, including, without limitation, inclusion of a fund on preferred or recommended sales lists, fund "supermarket" platforms and other formal sales programs; granting the Advisor and/or its affiliates access to the financial representative's sales force; granting the Advisor and/or its affiliates access to the financial representative's conferences and meetings; assistance in training and educating the financial representative's personnel; and obtaining other forms of marketing support.

The level of revenue sharing payments made to financial representatives may be a fixed fee or based upon one or more of the following factors: gross sales, current assets and/or number of accounts of a fund attributable to the financial representative, the particular fund or fund type or other measures as agreed to by the Advisor and/or its affiliates and the financial representatives or any combination thereof. The amount of these revenue sharing payments is determined at the discretion of the Advisor and/or its affiliates from time to time, may be substantial, and may be different for different financial representatives based on, for example, the nature of the services provided by the financial representative.

Receipt of, or the prospect of receiving, additional compensation may influence your financial representative's recommendation of a fund. You should review your financial representative's compensation disclosure and/or talk to your financial representative to obtain more information on how this compensation may have influenced your financial representative's recommendation of the fund.

Additional information regarding these revenue sharing payments is included in a fund's Statement of Additional Information, which is available to you on request at no charge (see the back cover of this Prospectus for more information on how to request a copy of the Statement of Additional Information).

It is possible that broker-dealers that execute portfolio transactions for a fund will also sell shares of a fund to their customers. However, the Advisor will not consider the sale of fund shares as a factor in the selection of broker-dealers to execute portfolio transactions for a fund. Accordingly, the Advisor has implemented policies and procedures reasonably designed to prevent its traders from considering sales of fund shares as a factor in the selection of broker-dealers to execute portfolio transactions for a fund. In addition, the Advisor and/or its affiliates will not use fund brokerage to pay for their obligation to provide additional compensation to financial representatives as described above.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often shares of each fund traded on NYSE Arca at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of each fund during the past calendar year can be found at Xtrackers.com.

Financial Highlights

The financial highlights are designed to help you understand recent financial performance. The figures in the first part of each table are for a single share. The total return figures represent the percentage that an investor in a fund would have earned (or lost), assuming all dividends and distributions were reinvested. This information has been audited by Ernst & Young LLP, independent registered public accounting firm, whose report, along with each fund's financial statements, is included in each fund's Annual Report (see "For More Information" on the back cover). The financial highlights for Xtrackers USD High Yield Corporate Bond ETF reflect a 5 for 4 stock split implemented on April 13, 2021 (see footnote b).

Xtrackers USD High Yield Corporate Bond ETF

	2021	Years Ended August 31, 2020 ^b	2019 ^b	2018 ^b	Period Ended 8/31/2017 ^{a,b}

a For the period December 7, 2016 (commencement of operations) through August 31, 2017.

b On April 13, 2021, the Xtrackers USD High Yield Corporate Bond ETF implemented a 5 for 4 stock split. Net asset value and per share information through April 12, 2021 have been updated to reflect the effect of the split. Shareholders received 5 shares for every 4 shares owned and net asset value per share decreased correspondingly.

c Based on average shares outstanding during the period.

d The Financial Accounting Standards Board issued Accounting Standards Update (ASU) 2017-08 to amend the amortization period to the earliest call date for purchased callable debt securities held at a premium. Effective September 1, 2019, the Fund adopted ASU 2017-08 and the effect of this change for the year ended August 31, 2020 was a decrease to net investment income per share by \$0.10 and \$0.12, increase to net realized and unrealized gain (loss) from investments per share by \$0.10 and \$0.12, and decrease to the ratio of net investment income to average net assets of 0.22% and 0.32%, for Xtrackers Short Duration High Yield Bond ETF and Xtrackers USD High Yield Corporate Bond ETF respectively. Per share data and ratios for years prior to August 31, 2020 have not been restated to reflect this change in presentation.

e Total Return would have been lower if certain expenses had not been reimbursed by the Advisor.

f Portfolio turnover rate does not include securities received or delivered from processing creations or redemptions.

* Annualized.

INDEX PROVIDERS AND LICENSES

Solactive, which is not an affiliate of the Advisor, is responsible for the rules-based methodology of the Solactive Indexes. Solactive is not affiliated with the Trust, the Advisor, The Bank of New York Mellon, the Distributor or any of their respective affiliates.

Solactive is responsible for administration and calculation of the Solactive Indexes. Solactive is responsible for implementing the methodology for the composition of each Underlying Index.

The Advisor has entered into a license agreement with Solactive to use each Underlying Index. All license fees are paid by the Advisor out of its own resources and not the assets of a fund.

DISCLAIMERS

Xtrackers USD High Yield Corporate Bond ETF, Xtrackers Short Duration High Yield Bond ETF, Xtrackers High Beta High Yield Bond ETF and Xtrackers Low Beta High Yield Bond ETF (the "funds") are not sponsored, endorsed, sold or promoted by Solactive. Neither Solactive nor any other party makes any representation or warranty, express or implied, to the owners of the funds or any member of the public regarding advisability of investing in funds generally or in these funds particularly or the ability of the Solactive USD High Yield Corporates Total Market Index, Solactive USD High Yield Corporates Total Market 0-5 Year Index, Solactive USD High Yield Corporates Total Market High Beta Index and Solactive USD High Yield Corporates Total Market Low Beta Index (the "Underlying Indexes") to track general stock market performance. Solactive is the licensor of certain trademarks, service marks and trade names of Solactive and of the Underlying Indexes that are determined, composed and calculated by Solactive without regard to the Trust, the Advisor or the funds. Solactive has no obligation to take the needs of the Advisor or the owners of the funds into consideration in determining, composing or calculating the Underlying Indexes. Solactive is not responsible for and has not participated in the determination of the timing of, prices at, or quantities of the funds to be issued or in the determination or calculation of the equation by which the funds are redeemable for cash. Neither Solactive nor any other party has any obligation or liability to owners of the funds in connection with the administration, marketing or trading of the funds.

Although Solactive shall obtain information for inclusion in or for use in the calculation of an index from sources that Solactive considers reliable, neither Solactive nor any other party guarantees the accuracy and/or the completeness of the indexes or any data included therein. Solactive is not responsible for informing third parties, including but not limited to, investors and/or financial intermediaries of the funds, of errors in the indexes. Neither Solactive nor any other party makes any warranty, express or implied, as to results to be obtained by licensee, licensee's customers and counterparties, owners of the funds, or any other person or entity from the use of the indexes or any data included hereunder or for any other use. Neither Solactive nor any other party makes any express or implied warranties, and Solactive hereby expressly disclaims all warranties of merchantability or fitness for a particular purpose with respect to the indexes or any data included therein. Without limiting any of the foregoing, in no event shall Solactive or any other party have any liability for direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

Shares of the funds are not sponsored, endorsed or promoted by NYSE Arca. NYSE Arca makes no representation or warranty, express or implied, to the owners of the shares of the funds or any member of the public regarding the ability of the funds to track the total return performance of the Underlying Indexes or the ability of the Underlying Indexes to track stock market performance. NYSE Arca is not responsible for, nor has it participated in, the determination of the compilation or the calculation of the Underlying Indexes, nor in the determination of the timing of, prices of, or quantities of shares of the funds to be issued, nor in the determination or calculation of the equation by which the shares are redeemable. NYSE Arca has no obligation or liability to owners of the shares of the funds in connection with the administration, marketing or trading of the shares of the funds.

NYSE Arca does not guarantee the accuracy and/or the completeness of the Underlying Indexes or any data included therein. NYSE Arca makes no warranty, express or implied, as to results to be obtained by the Trust on behalf of the funds as licensee, licensee's customers and counterparties, owners of the shares of the funds, or any other person or entity from the use of the subject index or any data included therein in connection with the rights licensed as described herein or for any other use. NYSE Arca makes no express or implied warranties and hereby expressly disclaims all warranties of merchantability or fitness for a particular purpose with respect to the Underlying Indexes or any data included therein. Without limiting any of the foregoing, in no event shall NYSE Arca have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

The Advisor does not guarantee the accuracy or the completeness of the Underlying Indexes or any data included therein and the Advisor shall have no liability for any errors, omissions or interruptions therein.

The Advisor makes no warranty, express or implied, to the owners of shares of the funds or to any other person or entity, as to results to be obtained by the funds from the use of the Underlying Indexes or any data included therein. The Advisor makes no express or implied warranties and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to the Underlying Indexes or any data included therein. Without limiting any of the foregoing, in no event shall the Advisor have any liability for any special, punitive, direct, indirect or consequential damages (including lost profits), even if notified of the possibility of such damages.
